ADVANCED EXCEL

1.FREEZING FIRST ROW

To Freeze the First row, select the second row and type the shortcut as given below.

Alt + w + f +f

Now if we start scrolling downwards the headings will be always on the screen.

2. AUTO FILLING BLANK CELLS

Create Data in Columns A and B as shown in the picture below.

	A	B
1	Product	City
2	Samsung	Chennai
3	Oppo	
4	Vivo	
5	Oneplus	
6	Redmi	
7	Realme	
8	iPhone	
9	Samsung	Madurai
10	Oppo	
11	Vivo	
12	Oneplus	
13	Redmi	
14	Realme	
15	iPhone	

Press Ctrl+A in the keyboard and it will select entire cells of data in both Columns A and B.

Now Press Ctrl+G which open **Go To** Window. In that window click on the **Special** button which will open the Go To Special window. Click on the **Blanks** option as shown in below picture and click on the **OK** button.

Now only the Blank cells will get selected as shown in the below picture

	A	B
1	Product	City
2	Samsung	Chennai
3	Oppo	
4	Vivo	
5	Oneplus	
6	Redmi	
7	Realme	
8	iPhone	
9	Samsung	Madurai
10	Oppo	
11	Vivo	
12	Oneplus	
13	Redmi	
14	Realme	
15	iPhone	

Now if you type =b2 and Press Ctrl+Enter key in the key board the Blank cells will be filled with the contents as shown in the below picture.

	A	B
1	Product	City
2	Samsung	Chennai
3	Oppo	Chennai
4	Vivo	Chennai
5	Oneplus	Chennai
6	Redmi	Chennai
7	Realme	Chennai
8	iPhone	Chennai
9	Samsung	Madurai
10	Oppo	Madurai
11	Vivo	Madurai
12	Oneplus	Madurai
13	Redmi	Madurai
14	Realme	Madurai
15	iPhone	Madurai

3. SHRINK TEXT SIZE

Type a set of Names in Column A and select them as shown in the below picture

1	Name
2	S.VANITHA
3	RAAJASRI.S
4	MONESH KANNA.S
5	GRACETON JOSHUA
6	L.V SHERON FAITH
7	S.PUNITHAN
8	SHARDHA.V
9	DIVYADHARSHINI.S
10	U.MALINI
11	R.VISHWA
12	E.SWETHA
13	NARASIMMAN. L
14	RAM KISHORE.M
15	VISHAL.S
16	ANBAZHAGAN.T
17	KISHORE.P
18	SANGEETHA.J
19	N.UDHAYA PRAKASAM
20	RAGINI.S
21	G.PAVITHRA
22	A.ARCHANA
23	R.VISHWA
24	DHANUSH.K
25	DINESH.K
26	R.PRIYADHARSHINI
27	DHARSHINI.M
28	JEEVAN PRASANTH.C

Under the Alignment Section in the Home tab click on the downward arrow which will open the alignment window and enable the **Shrink to Fit** option as shown in the below picture and click on the **OK** Button.

Format Cells

Number Alignment Font Border Fill Protection

Text alignment

Horizontal: Left (Indent) Indent: 0

Vertical: Bottom

☐ Justify distributed

Text control

☐ Wrap text

☒ Shrink to fit

☐ Merge cells

Right-to-left

Text direction: Context

Orientation

Text

0 Degrees

Now if the width of the Column A is resized the text inside Column A will automatically increase and decrease the font size as shown in the below picture.

	A		A
1	Name	1	Name
2	S.VANITHA	2	S.VANITHA
3	RAAJASRI.S	3	RAAJASRI.S
4	MONESH KANNA.S	4	MONESH KANNA.S
5	GRACETON JOSHUA	5	GRACETON JOSHUA
6	L.V SHERON FAITH	6	L.V SHERON FAITH
7	S.PUNITHAN	7	S.PUNITHAN
8	SHARDHA.V	8	SHARDHA.V
9	DIVYADHARSHINI.S	9	DIVYADHARSHINI.S
10	U.MALINI	10	U.MALINI
11	R.VISHWA	11	R.VISHWA
12	E.SWETHA	12	E.SWETHA
13	NARASIMMAN. L	13	NARASIMMAN. L
14	RAM KISHORE.M	14	RAM KISHORE.M
15	VISHAL.S	15	VISHAL.S
16	ANBAZHAGAN.T	16	ANBAZHAGAN.T
17	KISHORE.P	17	KISHORE.P
18	SANGEETHA.J	18	SANGEETHA.J
19	N.UDHAYA PRAKASAM	19	N.UDHAYA PRAKASAM

4. HIDE CELL CONTENTS

Select the cells from A1 to A10 and Click on the downward arrow under the numbers section which will open the Format Cells window. Click on Custom under the Category and type the following syntax `;;;` as shown in the picture and click on the OK button.

From now on whatever the user types in cells A1 to A10 will be automatically hidden.

5. REPLACE CELL CONTENTS

Select the cells from A1 to A10 and Click on the downward arrow under the numbers section which will open the Format Cells window. Click on Custom under the Category and type the following syntax **"Anigra Training Academy"";"Anigra Training Academy"** as shown in the picture and click on the OK button.

From now on whatever the user types in cells A1 to A10 will be Replaced with Anigra Training Academy.

	A
1	Name
2	Anigra Training Academy
3	Anigra Training Academy
4	Anigra Training Academy
5	Anigra Training Academy
6	Anigra Training Academy
7	Anigra Training Academy
8	Anigra Training Academy
9	Anigra Training Academy
10	Anigra Training Academy

6. ADDING 91 IN MOBILE NUMBERS

Create a set of Names in column A and 10-digit mobile number in Column B. Copy the entire mobile numbers from Column B and paste it in Column C as shown in the below picture.

	A	B
1	Name	Phone
2	Saivignesh.M	9789807041
3	Sathya.M	9710932260
4	Sathyanarayanan.B	7358501506
5	Sandhya.P	9840348649
6	Gayathri.P	7708558922
7	Krishna.P	9710344016
8	Prabir Nath.R	7358616730
9	pavithra.P	7824045640
10	Sankaran.V	9884580515
11	Nallamurugan.K	8807907180
12	Raju.R	9444169032
13	Mallikarjuna Rao	8825767675
14	Keerthana.M	7904874892
15	Praveen.M	9080941607
16	Isaivani.M	9360375031
17	Yamuna.V	9941402752
18	Ashokkumar.E	6385142281
19	Madhupallavi.M	9094503455

Select All the mobile numbers in Column C and click on the downward arrow (Rounded by green color) under the number section in the home tab as shown in the picture

This will open the Format Cells window with the number tab. Click on Custom listed as the last Category item and type **91#** and click on the OK button as shown in the below picture.

All the mobile numbers in Column C will be Prefixed with 91 as shown in the below picture.

	A	B	C
1	Name	Phone	Phone
2	Saivignesh.M	9789807041	919789807041
3	Sathya.M	9710932260	919710932260
4	Sathyanarayanan.B	7358501506	917358501506
5	Sandhya.P	9840348649	919840348649
6	Gayathri.P	7708558922	917708558922
7	Krishna.P	9710344016	919710344016
8	Prabirnath.R	7358616730	917358616730
9	pavithra.P	7824045640	917824045640
10	Sankaran.V	9884580515	919884580515
11	Nallamurugan.K	8807907180	918807907180
12	Raju.R	9444169032	919444169032
13	Mallikarjuna Rao	8825767675	918825767675
14	Keerthana.M	7904874892	917904874892
15	Praveen.M	9080941607	919080941607
16	Isaivani.M	9360375031	919360375031
17	Yamuna.V	9941402752	919941402752
18	Ashokkumar.E	6385142281	916385142281
19	Madhupallavi.M	9094503455	919094503455

7. AUTOMATICALLY FILL DOTS

In column A type numbers up to 10. Then select all the cells from A1 to A10 and Click on the downward arrow under the numbers section which will open the Format Cells window. Click on Custom under the Category and type the following syntax `#*.` as shown in the picture and click on the OK button.

This will add dots after the numbers till the width of Column A. If we adjust the width of Column A the numbers of dots will be adjusted automatically

8. PREFIXING 0 TO NUMBERS

In column A type numbers up to 10. Then select all the cells from A1 to A10 and Click on the downward arrow under the numbers section which will open the Format Cells window. Click on Custom under the Category and type the following syntax `0000#` as shown in the picture and click on the OK button

This will add three 0s in front of the numbers.

9. GENERATING RESULT STATUS

Create a student mark list data with student names in Column A. Type the marks for the students in Column B as shown in the below picture.

	A	B
1	Name	Mark
2	A	40
3	B	37
4	C	35
5	D	54
6	E	40
7	F	66
8	G	71
9	H	48
10	I	50
11	J	91
12	K	31
13	L	72
14	M	41
15	N	43
16	O	89
17	P	77
18	Q	33
19	R	82
20	S	60
21	T	67
22	U	43
23	V	48
24	W	57
25	X	76
26	Y	39
27	Z	32

In Column C in the C2 cell type =B2 and take the mouse pointer to the bottom right corner of C2 and drag till the last student's name. The same values found in Column B will be generated in Column C.

Select all the student marks in Column C and Click on the downward arrow under the numbers section which will open the Format Cells window. Click on Custom under the Category and type the following syntax **[Red][<40]"Fail";[Green][>=40]"Pass";** as shown in the picture and click on the OK button.

Any mark with 40 and above 40 will be changed as Green colored "Pass" text and under 40 will be changed as Red colored "Fail" text.

	A	B	C
1	Name	Mark	Result
2	A	40	Pass
3	B	37	Fail
4	C	35	Fail
5	D	54	Pass
6	E	40	Pass
7	F	66	Pass
8	G	71	Pass
9	H	48	Pass
10	I	50	Pass
11	J	91	Pass
12	K	31	Fail
13	L	72	Pass
14	M	41	Pass
15	N	43	Pass

10. FORMATTING CELLS WITH ICONS

Create a Data with Column A having student names, Column B having Expected Marks, Column C having Actual Marks as shown in the below picture.

	A	B	C
1	Name	Expected Mark	Actual Mark
2	A	68	64
3	B	82	65
4	C	70	84
5	D	76	70
6	E	70	93
7	F	78	64
8	G	76	70
9	H	68	90
10	I	93	81
11	J	89	44
12	K	78	88
13	L	78	46
14	M	83	69
15	N	64	85
16	O	66	49

Column D will have the difference between Actual Marks and Expected Marks. Click on D2 and type the formula as shown in the below picture.

Select all the Difference Marks in Column D and Click on the downward arrow under the numbers section which will open the Format Cells window. Click on Custom under the Category and type the following syntax

[Green]0"▲";[Red]0"▼";"NIL" as shown in the picture and click on the OK button.

For the upward and downward triangle press the windows key and the dot key immediately in the keyboard and double click on the icons to get it added in the syntax. The negative marks will have red colored downward triangle along with the difference mark and the positive marks will have an upward triangle along with the difference mark as shown in the below picture.

	A	B	C	D
1	Name	Expected Mark	Actual Mark	Variance
2	A	68	64	4▼
3	B	82	65	17▼
4	C	70	84	14▲
5	D	76	70	6▼
6	E	70	93	23▲
7	F	78	64	14▼
8	G	76	70	6▼
9	H	68	90	22▲
10	I	93	81	12▼
11	J	89	44	45▼
12	K	78	88	10▲
13	L	78	46	32▼
14	M	83	69	14▼
15	N	64	85	21▲
16	O	66	49	17▼

11. FORMATTING CELLS WITH COLOR INDEX

Create a student mark list data with student names in Column A. Type the marks for the students in Column B as shown in the below picture.

	A	B
1	Name	Marks
2	A	37
3	B	91
4	C	86
5	D	90
6	E	90
7	F	36
8	G	72
9	H	89
10	I	37
11	J	32
12	K	43
13	L	93
14	M	97
15	N	51
16	O	69

Select all the student marks in Column B and Click on the downward arrow under the numbers section which will open the Format Cells window. Click on Custom under the Category and type the following

syntax **[Color10][>=50]#👍;[Color3]#👎** as shown in the picture and click on the OK button.

The marks 50 and above will have a green color thumbs up and the marks below 50 will have a red color thumb down as shown in the below picture.

	A	B
1	Name	Marks
2	A	37👎
3	B	91👍
4	C	86👍
5	D	90👍
6	E	90👍
7	F	36👎
8	G	72👍
9	H	89👍
10	I	37👎
11	J	32👎
12	K	43👎
13	L	93👍
14	M	97👍
15	N	51👍

Color 10 refers to a slight darker green and color 3 refers to red color.

12. INSERTING DATE AND TIME

Click on cell A1 and type **=Today()** and press the Enter key. The current system date will be appear in the A1 cell. Similarly type **Ctrl;** which will give the same result.

Click on cell B1 and type **=Now()** and press the Enter key. The current system date and current time will be appear in the B1 cell. Similarly type **Ctrl:** which will display the current system time alone.

13. FILL SERIES

Click on cell A1 and type the number 1 and click on Fill button located in the Editing Section and select the series option. You can also type Alt H F I S as shortcut which will open the Series window as shown in the picture

Changing the options as shown in the picture will generate 1 to 25 in Column A. The Linear method uses Addition and Subtraction Arithmetic Operators.

If we want values to be multiplied and filled in Columns we should select the Growth option.

14. INSERTING DATES USING FILL SERIES

Click on cell A1 and type the starting date. With the A1 Cell selected and click on Fill button located in the Editing Section and select the series option. You can also type Alt H F I S as shortcut which will open the Series window as shown in the picture and click on the OK button.

The screenshot shows the 'Series' dialog box in Microsoft Excel. The dialog box has three main sections: 'Series in', 'Type', and 'Date unit'. In the 'Series in' section, the 'Columns' radio button is selected. In the 'Type' section, the 'Date' radio button is selected. In the 'Date unit' section, the 'Day' radio button is selected. Below these sections, there is a checkbox for 'Trend' which is unchecked. At the bottom, there are two input fields: 'Step value' with the value '1' and 'Stop value' with the value '30-11-24'. At the very bottom, there are two buttons: 'OK' and 'Cancel'. The 'OK' button is highlighted with a blue border.

This will fill the dates from 01-11-24 to 30-11-24. If we want to fill only the working days, we need to select the **Weekday** option situated below the **Day** and Saturdays and Sundays will be omitted and only the days from Monday to Friday in the month of November 2024 will be filled.

15. FLASH FILL

	A	B	C
1	Name	First Name	Last Name
2	MAN SINGH	Man	Singh
3	RAJA RATHINAM	Raja	Rathinam
4	HARSHA VARADHINI		
5	DHARMA RAJ		
6	SANJAY KUMAR		
7	MUGIL ARASI		
8	BUVAN ESHWARI		
9	PAVITRA CHETTYAR		
10	KAVIY ARASAN		
11	DENDRY LEUDHEYAN		
12	ALAFU JAYANDRAN		
13	CHOCKA CIVAM		
14	INDHU MATHI		
15	NAREN DRAN		
16	SIM SON		
17	SENTHAMIZH SELVAN		
18	SOBBAN PRASATH		
19	VIGNESH WARAN		

Type a list of Full names as shown in the above picture. Then in the First name column i.e. is Column B. In Cells B1 & B2 type the first name as shown in the above picture. Then select all the cells in Column B till the content in column A and click on Fill button located in the Editing Section and select the Flash fill option. You can also type Alt H F I F as shortcut and it will fill the first name for all the names as shown in the below picture.

	A	B	C
1	Name	First Name	Last Name
2	MAN SINGH	Man	Singh
3	RAJA RATHINAM	Raja	Rathinam
4	HARSHA VARADHINI	Harsha	
5	DHARMA RAJ	Dharma	
6	SANJAY KUMAR	Sanjay	
7	MUGIL ARASI	Mugil	
8	BUVAN ESHWARI	Buvan	
9	PAVITRA CHETTYAR	Pavitra	
10	KAVIY ARASAN	Kaviy	
11	DENDRY LEUDHEYAN	Dendry	
12	ALAFU JAYANDRAN	Alafu	
13	CHOCKA CIVAM	Chocka	
14	INDHU MATHI	Indhu	
15	NAREN DRAN	Naren	
16	SIM SON	Sim	
17	SENTHAMIZH SELVAN	Senthamizh	
18	SOBBAN PRASATH	Sobban	
19	VIGNESH WARAN	Vignesh	

Do the same procedure for the Last name column also. The Flash fill read the pattern of the Text data i.e. filling the content before the space in the full names and will fill the same pattern to all the selected blank cells.

16. FIND & REPLACE

Create a set of data in Column A and Column B as shown in the Below picture

	A	B	C	D
1	Name	A		
2	Test1	57		
3	Test2	50		
4	Name	B		
5	Test1	29		
6	Test2	41		
7	Name	C		
8	Test1	28		
9	Test2	75		
10	Name	D		
11	Test1	72		
12	Test2	24		
13	Name	E		
14	Test1	65		
15	Test2	24		
16	Name	F		
17	Test1	20		
18	Test2	47		
19	Name	G		
20	Test1	75		
21	Test2	87		
22	Name	H		
23	Test1	68		
24	Test2	51		
25	Name	I		
26	Test1	19		
27	Test2	52		
28				

Now type the Titles as shown in picture below

	A	B	C	D	E	F
1	Name	A		Name	Test 1	Test 2
2	Test1	57				
3	Test2	50				
4	Name	B				
5	Test1	29				
6	Test2	41				
7	Name	C				
8	Test1	28				
9	Test2	75				
10	Name	D				
11	Test1	72				
12	Test2	24				
13	Name	E				
14	Test1	65				
15	Test2	24				
16	Name	F				
17	Test1	20				
18	Test2	47				
19	Name	G				
20	Test1	75				
21	Test2	87				
22	Name	H				
23	Test1	68				
24	Test2	51				
25	Name	I				
26	Test1	19				
27	Test2	52				
28						

Under each title fill the contents as shown in the picture below.

	A	B	C	D	E	F
1	Name	A		Name	Test 1	Test 2
2	Test1	57		b1	b2	b3
3	Test2	50		b4	b5	b6
4	Name	B		b7	b8	b9
5	Test1	29		b10	b11	b12
6	Test2	41		b13	b14	b15
7	Name	C		b16	b17	b18
8	Test1	28				
9	Test2	75				
10	Name	D				
11	Test1	72				
12	Test2	24				
13	Name	E				
14	Test1	65				
15	Test2	24				
16	Name	F				
17	Test1	20				
18	Test2	47				
19	Name	G				
20	Test1	75				
21	Test2	87				
22	Name	H				
23	Test1	68				
24	Test2	51				
25	Name	I				
26	Test1	19				
27	Test2	52				
28						

Select all the cells from D2 to F10 and click on the **Find & Select** button under the Editing section and select the **Replace** option which will open the **Find and Replace window** and type the content as shown in the picture below

D	E	F
Name	Test 1	Test 2
b1	b2	b3
b4	b5	b6
b7	b8	b9
b10	b11	b12
b13	b14	b15
b16	b17	b18
b19	b20	b21
b22	b23	b24
b25	b26	b27

Find and Replace

Find Replace

Find what: No Format Set Format...

Replace with: No Format Set Format...

Within: ☐ Match case

Search: ☐ Match entire cell contents

Look in: Options <<

Replace All Replace Find All Find Next Close

Click on the **Replace All** button in the Find and Replace window and all the values from the cells B1 to B27 will be replaced in the Columns D2 to F10 as shown in the below picture.

	A	B	C	D	E	F
1	Name	A		Name	Test 1	Test 2
2	Test1	57		A	57	50
3	Test2	50		B	29	41
4	Name	B		C	28	75
5	Test1	29		D	72	24
6	Test2	41		E	65	24
7	Name	C		F	20	47
8	Test1	28		G	75	87
9	Test2	75		H	68	51
10	Name	D		I	19	52

The concept which applies the values in the B2 to B27 in the cells D2 to F10 is called as **Cell Reference**. If we need the value of B2 appearing in various different cells, instead of typing the value again and again or going for copy and paste we can use this Cell Reference concept and type **=B2** in the cells which should have the same value as B2.

17. STOCK STATUS COLOR CHANGE

Type the Following Contents in Column A and B as shown in the below picture

	A	B
1	Product	Stock
2	Mouse	19
3	Key board	27
4	Processor	61
5	Ram	23
6	HDD	59
7	Monitor	19
8	Cabinet	53
9	SMPS	55
10	Power Card	15

Select column A and click on **Conditional formatting** and click on New Rule and select the option as shown in the picture

New Formatting Rule

Select a Rule Type:

- Format all cells based on their values
- Format only cells that contain
- Format only top or bottom ranked values
- Format only values that are above or below average
- Format only unique or duplicate values
- Use a formula to determine which cells to format

Edit the Rule Description:

Format values where this formula is true:

Preview: No Format Set

OK Cancel

=\$B2=0

We just need to type =B2 and then click F4 function key three times so the it will be changing to \$B2. Then click the Format button and change the settings as shown in the below picture

Change the **Font Style** to **Bold Italic**, **Colour Red**, Enable **Strike Through**. Click **OK** button twice. Click on **Apply** button and **OK** button.

With the Column A content selected repeat the same procedures and type the formula as shown in the below picture

Click on the Format button and change the options as shown in the below picture

Change the **Font Style** to **Bold Italic**, **Colour Green** and Click **OK** button twice. Click on **Apply** button and **OK** button.

Now with the Column B values greater than 0 the Products in Column A will be green. If any product is out of stock and when we type 0 in column B for that specific product then it will change the style of the font as red color with the strike through effect as shown in the below picture.

	A	B
1	Product	Stock
2	Mouse	19
3	Key board	27
4	Processor	61
5	Ram	23
6	HDD	59
7	Monitor	0
8	Cabinet	53
9	SMPS	55
10	Power Card	0
11		

18. TASK STATUS

Type the heading as **Task** in A1 type the heading as **Status** in B1. Type certain task from cells A2 to A11 as shown in the below Picture.

	A	B
1	Task	Status
2	HO Payment	
3	Question paper	
4	Tally classes	
5	K call	
6	Course Material	
7	Staff Training	
8	Broadband bill	
9	Home Wifi	
10	A/c completion	
11	Tally projects	
12	Word Projects	

Select the cells B2 to B11 and click on Conditional Formatting click on New Rule and in the appearing window make the changes in the options as shown in the below picture and click the OK Button.

Edit Formatting Rule

Select a Rule Type:

- Format all cells based on their values
- Format only cells that contain
- Format only top or bottom ranked values
- Format only values that are above or below average
- Format only unique or duplicate values
- Use a formula to determine which cells to format

Edit the Rule Description:

Format all cells based on their values:

Format Style: Icon Sets

Icon Style: Custom ☒ Show Icon Only

Display each icon according to these rules:

Icon		Value	Type
	when value is	>= 1	Number
	when < 1 and	>= 0	Number
	when < 0		

Select A2 to A11 and click on Conditional Formatting and click on **New Rule** and change the options and type the formula as shown in the below picture.

Click on the Format button and make the changes as shown in the picture below and click on the OK button this will accept the change and go to the previous window and click on the OK button in the main window

Select A2 to A11 and click on Conditional Formatting and click on **New Rule** and change the options and type the formula as shown in the below picture.

Click on the Format button and make the changes as shown in the picture below and click on the OK button this will accept the change and go to the previous window and click on the OK button in the main window

Now in Cells from B2 to B11 if we type 1 the green Tick mark will appear on that cell and the A column cell will turn green. If we type 0 red color x mark will appear with the text in red.

19. AUTOMETIC BORDER CREATION

Click on Conditional Formatting and click on the **New Rule** and type in the formula section as shown in the below picture

Then click on the Format button and in the Format Cells window click on the Border tab and change the options as shown in the below picture

Click OK button twice to come back to Rules main window. In the **Applies to** Column type **=A:D or A:E** so it will create border for the cells till that Column and press “F4” key to lock the cell as shown in the below picture

Click on **Apply** button and **OK** button

Now if you start typing any content in A1 border will be automatically appearing from A1 to D1 and similarly whatever you type in the Cell A2 borders will be created from A2 to D2.

20. FILL ALTERNATE CELLS

Select Cells from A1 to H8 and Click on Conditional Formatting and click on New Rule and type the formula as shown in the below picture

Then click on the Format button and select the options as shown in the below picture

Click on the OK button to close this window and OK button to close the New Rule window and the alternate rows and columns from A1 to H8 will be filled with the selected colors.

21. FINDING SUNDAYS OF A MONTH

Type any month on A1 cell and in A2 type the starting date of the month for eg(1-12-24) and select the A2 cell. Click on Fill button located in the Editing Section and select the series option. You can also type Alt H F I S as shortcut which will open the Series window as shown in the below picture

This will fill all the dates of the month. Now select the cells from A2 to A32 and Click on Conditional Formatting and click on New Rule and type the formula as shown in the below picture

Then click on the Format button and change the **Font** color to Yellow and **Fill** color to red and click OK button to close Format Cells window and OK button to close the New Rule and all the Sunday dates will be filled with Red color and text in Yellow color as shown in the below picture

December
01-12-2024
02-12-2024
03-12-2024
04-12-2024
05-12-2024
06-12-2024
07-12-2024
08-12-2024
09-12-2024
10-12-2024
11-12-2024
12-12-2024
13-12-2024
14-12-2024
15-12-2024
16-12-2024
17-12-2024
18-12-2024
19-12-2024
20-12-2024
21-12-2024
22-12-2024

22. RESULT WITH IF

Create a set of Data as shown in the below picture

Name	Marks	Result		Pass	Fail
A	69				
B	91				
C	45				
D	34				
E	70				
F	56				
G	34				
H	89				
I	77				
J	22				
K	25				
L	47				
M	60				
N	67				

Select C2 and type the following IF formula as shown in the picture below

Drag the Result to fill from C3 to C27 and it will fill with Pass or Fail according to the IF condition as shown in the below picture

Name	Marks	Result
A	69	Pass
B	91	Pass
C	45	Pass
D	34	Fail
E	70	Pass
F	56	Pass
G	34	Fail
H	89	Pass
I	77	Pass
J	22	Fail
K	25	Fail
L	47	Pass
M	60	Pass
N	67	Pass

Select entire data in Column C, Click on Conditional Formatting and click on New Rule and type the formula as shown in the below picture

Click on the Format button and change Font color to Yellow and Fill color to Dark-green and click on the OK button to close the Format window and again click on OK button to close the New Rule window.

Select entire data in Column C, Click on Conditional Formatting and click on New Rule and type the formula as shown in the below picture

Click on the Format button and change Font color to Yellow and Fill color to Red and click on the OK button to close the Format window and again on OK button to close the New Rule window.

23. HIGHLIGHTING ENTIRE ROW

Create a set of data as shown in the below picture

Name	Test1	Test2	Test3	Test4	Test5
A	57	50	41	38	70
B	29	41	57	38	52
C	28	75	56	32	51
D	72	24	66	96	65
E	65	24	60	58	72
F	20	47	41	90	91
G	75	87	85	67	53
H	68	51	43	95	36
I	19	52	31	96	30

Press Ctrl+A to select the entire set of Data and click on the Conditional Formatting button and click on the New Rule and type the formula as shown in the below picture

Now Click on the Format button and Change the Fill color to any color of your choice and click on the OK button to close the Format window and again on OK button to close the New Rule window.

If the user clicks on any cell the Entire Row will be highlighted with the Fill color selected by the user.

24. AUTOMATIC SERIAL NUMBER

Create headings and data as shown in the below picture

	A	B
1	S.no	Name
2		A
3		B
4		C
5		D
6		E
7		F
8		G
9		H
10		I
11		J
12		K
13		L
14		M
15		N
16		O

Click on A2 cell and type the formula as shown in the below picture

A2

⌵

:

✕

✓

fx

=IF(B2<>"",ROW(A1),"")

Now in A2 the number 1 will be fixed drag it till A27 to fill the automatic serial numbers from 1 to 26 for the names A to Z in column B as shown in the below picture.

	A	B
1	S.no	Name
2	1	A
3	2	B
4	3	C
5	4	D
6	5	E
7	6	F
8	7	G
9	8	H
10	9	I
11	10	J

25. EXPIRY STATUS WITH IF

Create date using the formula as shown in the below picture

B1			✕	✓	<i>fx</i>	=TODAY()
	A	B	C			
1	Today	01-12-2024				

Then create the headings as shown in the below picture

	A	B	C
1	Today	01-12-2024	
2			
3			
4	Date	Days Remaining	Status
5			

From A5 to A20 select the cells and type the formula as shown in the below picture

SUM		✕	✓	<i>fx</i>	=DATE(2024,RANDBETWEEN(1,12),RANDBETWEEN(1,31))		
	A	B	C	D	E	F	G
1	Today	01-12-2024					
2							
3							
4	Date	Days Remaining	Status				
5	=DATE(2024,RANDBETWEEN(1,12),RANDBETWEEN(1,31))						
6							
7							
8							
9							
10							
11							
12							
13							
14							
15							
16							
17							
18							
19							
20							
21							

Press Ctrl+Enter which will generate random dates as shown in the below picture

	A	B	C
1	Today	01-12-2024	
2			
3			
4	Date	Days Remaining	Status
5	17-11-2024		
6	08-12-2024		
7	30-07-2024		
8	13-09-2024		
9	26-08-2024		
10	28-07-2024		
11	09-08-2024		
12	08-07-2024		
13	05-05-2024		
14	20-03-2024		
15	21-07-2024		
16	30-09-2024		
17	15-10-2024		
18	05-08-2024		
19	06-08-2024		
20	19-11-2024		

With the dates selected copy and paste special as values so that it will become static.

Click on B5 and type the formula and Press F4 to lock B1 as shown in the below picture

B1		✖	✔	<i>fx</i>	=A5-\$B\$1
	A	B	C		
1	Today	01-12-2024			
2					
3					
4	Date	Days Remaining	Status		
5	17-11-2024	=A5-\$B\$1			

This will generate the date differences as shown in the below picture

	Date	Days Remaining	Status
5	17-11-2024	-14	
6	08-12-2024	7	
7	30-07-2024	-124	
8	13-09-2024	-79	
9	26-12-2024	25	
10	28-07-2024	-126	
11	09-08-2024	-114	
12	20-12-2024	19	
13	05-05-2024	-210	
14	20-03-2024	-256	
15	21-07-2024	-133	
16	30-12-2024	29	
17	15-10-2024	-47	
18	05-08-2024	-118	
19	06-08-2024	-117	
20	19-11-2024	-12	

Click on C4 cell and type the formula as shown in the picture

C4		=IF(B4<0,"Expired",IF(B4<30,"Expiring Soon","on Time"))
----	--	---

This will create the result as shown in the below picture

	A	B	C
1	Today	01-12-2024	
2			
3			
4	Date	Days Remaining	Status
5	17-11-2024	-14	Expired
6	08-12-2024	7	

If we drag it till C20 it will give the status as shown in the below picture

Date	Days Remaining	Status
17-11-2024	-14	Expired
08-12-2024	7	Expiring Soon
30-07-2024	-124	Expired
13-09-2024	-79	Expired
26-12-2024	25	Expiring Soon
28-07-2024	-126	Expired
09-08-2024	-114	Expired
20-12-2024	19	Expiring Soon
05-05-2024	-210	Expired
20-03-2024	-256	Expired
21-07-2024	-133	Expired
30-12-2024	29	Expiring Soon
15-10-2024	-47	Expired
05-08-2024	-118	Expired
06-08-2024	-117	Expired
19-11-2024	-12	Expired

26. FILLING BLANK CELLS

Create a set of Data as shown in the below picture

	A	B	C	D	E	F
1		53		75		65
2	81		59		58	73
3		94	68		86	
4	51			89		84
5	57	53	73		95	
6	56			62		
7		84	60		91	65
8	80			53		70
9	87		51			53
10		88	93		67	
11	51	52		51		83
12			60		83	
13	93	72		57		53
14		57			74	
15			87	95		61
16	65	79			55	74

Select the blank columns as shown in the below picture

	A	B	C	D	E	F	G	H	I	J	K	L	M
1		53		75		65							
2	81		59		58	73							
3		94	68		86								
4	51			89		84							
5	57	53	73		95								
6	56			62									
7		84	60		91	65							
8	80			53		70							
9	87		51			53							
10		88	93		67								
11	51	52		51		83							
12			60		83								
13	93	72		57		53							
14		57			74								
15			87	95		61							
16	65	79			55	74							

Then in the formula bar type the formula as shown in the picture

When you press the Enter key after the formula is typed it will create a copy of the values from A1 to F16 and where ever there are Blank cells it will fill those cells with 0 as shown in the below picture

	A	B	C	D	E	F	G	H	I	J	K	L	M
1		53		75		65		0	53	0	75	0	65
2	81		59		58	73		81	0	59	0	58	73
3		94	68		86			0	94	68	0	86	0
4	51			89		84		51	0	0	89	0	84
5	57	53	73		95			57	53	73	0	95	0
6	56			62				56	0	0	62	0	0
7		84	60		91	65		0	84	60	0	91	65
8	80			53		70		80	0	0	53	0	70
9	87		51			53		87	0	51	0	0	53
10		88	93		67			0	88	93	0	67	0
11	51	52		51		83		51	52	0	51	0	83
12			60		83			0	0	60	0	83	0
13	93	72		57		53		93	72	0	57	0	53
14		57			74			0	57	0	0	74	0
15			87	95		61		0	0	87	95	0	61
16	65	79			55	74		65	79	0	0	55	74

27. CREATING DYNAMIC CHART

Create a data as shown in below picture

	A	B	C	D	E
1					
2					
3					
4					
5					Admission
6				Actual	15%
7				Remaining	85%

Where Actual should have 15% as input and the Remaining E7 Cell should use the formula as shown in below picture

If we do so what ever value, we change in E6 the value in E7 will change according to the formula.

Select the entire Data. Click on the Insert menu and click on the down arrow in the Pie chart and select the Doughnut as shown in below picture

It will create a chart as shown in below picture

Double click on the Blue area which will open the Format Data Series window. Click on the Paint bucket icon and select solid fill option and select Green color and similarly select the orange color and do the same procedures and change the color to Red as shown in below picture

With the chart selected click on the Format menu and under the Insert Shapes section click on the Text Box and create a Text Box inside the chart as shown in below picture

Click on the Formula bar and type = and click on the E6 cell and press the Enter key in the key board. This will put the E6 cell value inside the text box. Select it and increase the font size as shown in below picture

Now if you change any value in E6 the chart will change dynamically according to the new value in E6 as shown in below picture

28. DYNAMIC CHART

Create a Data as shown in below picture

	A	B
1	Admissions	10

Click on the Developer tab and click on the Insert button and Select the Spin button under Form controls and create it as shown in below picture

Right click on the Spin button and click on the Format Control and change the values and click on the OK button as shown in below picture

A screenshot of the 'Format Object' dialog box in Excel. The 'Control' tab is selected. The 'Current value' is 10. The 'Minimum value' is 0. The 'Maximum value' is 100. The 'Incremental change' is 1. The 'Page change' is empty. The 'Cell link' is \$B\$1. The '3-D shading' checkbox is checked. The dialog box has a title bar 'Format Object' and a close button (X) in the top right corner.

Create a set of data as shown in below picture

E	F
LC	6
Adm	10
Remaining	90
UC	6

The data has been created from E4 to F7. In E5 column where we want the actual admissions done type as shown in below picture

LC	6
Adm	=B1
Remaining	90
UC	6

In E6 where remaining Admissions has to be displayed type the formula as shown in below picture

LC	6
Adm	10
Remaining	=100-F5
UC	6

This will fill the E6 column from 100 – Actual Admission which now is 90 (100-10). When we click the upward button in the spin button the number of Admissions will increase and the number of remaining will be reduced.

Now select the Data from E4 to F7 i.e. from LC 6 to UC 6 and click on the Insert menu and in the Column and Bar chart select 3D Stacked column chart as shown in below picture

This will create a chart as shown in below picture

Double click on the big Cube to select it individually and right click and click on Format Data Series and change the option as shown in below picture

All the cubes will change to Cylinders as shown in below picture

With the chart selected under Chart Design menu click on the Switch Row / Column button as shown in below picture

The chart will change as shown in below picture

Double click on the second section i.e. the Gray portion and in the Format Data series window click on the Paint bucket icon and change the option as shown in below picture

The chart will change as shown in below picture

Now Double click the below portion of the Transparent i.e. the orange color and in the Format Data series window click on the Paint bucket icon and change the option as shown in below picture

The Chart will change as shown in below picture

Now if you click on the Up arrow of the Spin button the Admissions will increase in Cell B1 as shown in below picture

A	B
Admissions	20

The Admission value will be updated in E6 cell and the Remaining value will also be changed in E7 cell as shown in below picture

LC	6
Adm	20
Remaining	80
UC	6

This change will change the chart as shown in below picture

This chart changes according the Admission and Remaining Values thus making it as a Dynamic chart.

29. MOVE AND SIZE PICTURES

Create a Dataset as shown in the below picture

	A	B	C
1	Product	Stock	Sample
2	Mouse	25	
3	Key Board	30	
4	RAM	20	
5	Pen Drive	40	
6	LapTop	20	

Under the Samples heading insert the Images of the Products and adjust the row height and the size of the image to be inside the cell as shown in the below picture

	A	B	C
1	Product	Stock	Sample
2	Mouse	25	
3	Key Board	30	
4	RAM	20	
5	Pen Drive	40	
6	LapTop	20	

Select the entire Dataset and press Ctrl+T in the keyboard to convert the dataset in to a table as shown in the below picture.

	A	B	C
1	Product	Stock	Sample
2	Mouse	25	
3	Key Board	30	
4	RAM	20	
5	Pen Drive	40	
6	LapTop	20	

Create Table ? X

Where is the data for your table?

\$A\$1:\$C\$6 

☒ My table has headers

OK Cancel

Enable the Options as shown in the Create Table window and click on the OK button. The entire Dataset will be converted as a table as shown in the below picture

	A	B	C
1	Product	Stock	Sample
2	Mouse	25	
3	Key Board	30	
4	RAM	20	
5	Pen Drive	40	
6	LapTop	20	

Right on the Mouse picture and select the Format Picture which will open the Format Picture window. Click on the Size and Properties icon and change the options as shown in the below picture

Repeat the same procedure for all the product images.

Now if you Click on the Filter button of the Product and Select any product as shown in the below picture

If you enable any one product the Table will filter the data as shown in the below picture

Excel Table will show only the selected product or products and the images will automatically move to the new cell as shown in the below picture

	A	B	C
1	Product	Stock	Sample
4	RAM	20	
5	Pen Drive	40	

30. CREATING USER FORM

Create a new file and type the Dataset as shown in the below picture

	A	B	C	D	E	F
1	Name	Test1	Test2	Test3	Test4	Test5
2	A	57	50	41	38	70
3	B	29	41	57	38	52
4	C	28	75	56	32	51
5	D	72	24	66	96	65
6	E	65	24	60	58	72
7	F	55	57	67	64	55
8	G	47	51	63	58	71

Click on the Down arrow in Quick Access tool bar and select the More commands as shown in the below picture

This will open the Excel options window as shown in the below picture

Click on the Popular Commands drop down list and select the Commands Not in the Ribbon option. This will display a set of commands that are not available in the ribbon as shown in the picture

Scroll down and click on the Form command and click on the add button at the center and it will get added to the right side as shown in the below picture

Click on the OK button and the Form button will be displayed on the Quick Access toolbar as shown in the below picture

Click on the Form button which will open an User Form which will open the form as shown in the below picture

The image shows a 'User Form' dialog box. It has a title bar that says 'Sheet1'. Inside the dialog, there are several input fields: 'Name:' with the value 'A', 'Test1:' with the value '57', 'Test2:' with the value '50', 'Test3:' with the value '41', 'Test4:' with the value '38', and 'Test5:' with the value '70'. To the right of these fields, there are several buttons: 'New', 'Delete', 'Restore', 'Find Prev' (which is highlighted with a blue border), 'Find Next', 'Criteria', and 'Close'. The 'Find Prev' button is the one that was clicked to open this form.

The user can navigate the Dataset by clicking the Find Next button. Users can start adding Data to the Dataset by clicking the New button as shown in the below picture

After typing the Data if the user clicks on the New button again the newly added record will be added to the Dataset as shown in the below picture

	A	B	C	D	E	F
1	Name	Test1	Test2	Test3	Test4	Test5
2	A	57	50	41	38	70
3	B	29	41	57	38	52
4	C	28	75	56	32	51
5	D	72	24	66	96	65
6	E	65	24	60	58	72
7	F	55	57	67	64	55
8	G	47	51	63	58	71
9	H	55	57	63	59	44

31. QUICK ANALYSIS

The Quick Analysis is used to analyze the dataset and give us the required output. Create a Dataset as shown in the below picture

	A	B	C
1	Months	BV	Percentage
2	January	3	
3	February	7	
4	March	6	
5	April	5	
6	May	4	
7	June	11	
8	July	6	
9	August	8	
10	September	4	
11	October	12	
12	November	9	
13	December	5	

Select All the data in Column B which will show an icon on the bottom right corner of B13 which is the Quick Analysis icon. Click on the icon and click on the total and click on the right arrow and click on the Total % as shown in the below picture

This will calculate the Total of the selected values and will generate the Percentage contribution of the Values in the cells B2 to B13 as shown in the below picture

	A	B	C
1	Months	BV	Percentage
2	January	3	3.75%
3	February	7	8.75%
4	March	6	7.50%
5	April	5	6.25%
6	May	4	5.00%
7	June	11	13.75%
8	July	6	7.50%
9	August	8	10.00%
10	September	4	5.00%
11	October	12	15.00%
12	November	9	11.25%
13	December	5	6.25%

32. RUNNING TOTALS

This function is used to find out the running totals. Create a Dataset as shown in the below picture

	A	B	C
1	Product	Sales Amnt	Running Total
2	Apple	130	
3	Banana	114	
4	Mango	158	
5	Guava	191	
6	Wamen	170	
7	SB	127	
8	RB	165	
9	Grapes	183	
10	Orange	160	

Select the cells in B column and at the bottom right corner of B10 cell the Quick Analysis icon will appear. Click on the Totals and click on the right arrow and select the Running Totals listed at the last as shown in the below picture

This will calculate the totals of the current cell value with the previous cell value and insert in the Column C as shown in the below picture

	A	B	C
1	Product	Sales Amnt	Running Total
2	Apple	130	130
3	Banana	114	244
4	Mango	158	402
5	Guava	191	593
6	Wamen	170	763
7	SB	127	890
8	RB	165	1055
9	Grapes	183	1238
10	Orange	160	1398

33. SORT OPTIONS

Create a Dataset as shown in the below picture.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
1	Product	Location	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
2	Nokia	Chennai	252	120	333	262	261	176	159	122	198	150	198	104
3	Samsung	Chennai	202	238	214	340	315	165	114	140	249	234	184	199
4	Oneplus	Chennai	187	260	246	312	276	270	324	248	183	310	271	337

In this if the months are to be rearranged according to the financial year. The sales detail should start from April and end in March.

Right on Row 1 and click on the Insert Command as shown in the below picture.

This will insert a row pushing the row number 1 to take the position of 2nd row as shown in the below picture.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
1														
2	Product	Location	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
3	Nokia	Chennai	252	120	333	262	261	176	159	122	198	150	198	104
4	Samsung	Chennai	202	238	214	340	315	165	114	140	249	234	184	199

In the inserted row type the numbers as shown in the below picture.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
1	1	2	12	13	14	3	4	5	6	7	8	9	10	11
2	Product	Location	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

Now Select the entire Dataset and click on the Data menu and click on the Sort button which will open the Sort window as shown in the below picture.

Click on the Options button and select the options as shown in the below picture and click on the OK button.

Now in the Sort window click on the drop-down list in Sort by and select Row 1 and under the Order select Smallest to largest as shown in the below picture and click on the OK button.

This will change the column order as per the numbers as shown in the below picture.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
1	1	2	3	4	5	6	7	8	9	10	11	12	13	14
2	Product	Location	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
3	Nokia	Chennai	262	261	176	159	122	198	150	198	104	252	120	333
4	Samsung	Chennai	340	315	165	114	140	249	234	184	199	202	238	214

Now we can right click on the Row 1 and select the Delete command to delete it.

34. INSERTING BLANK ROWS

Create a Dataset as shown in the below picture.

	A	B	C	D	E
1	Name	FInAc	FiMa	CosAc	
2	A	49	58	48	1
3	B	40	92	64	2
4	C	83	41	76	3
5	D	58	54	66	4
6	E	73	56	86	5
7	F	56	84	79	6
8	G	92	54	60	7
9	H	48	73	73	8
10	I	57	38	62	9

Copy and Paste the numbers in Column E as shown in the below picture

	A	B	C	D	E
1	Name	FInAc	FiMa	CosAc	
2	A	49	58	48	1
3	B	40	92	64	2
4	C	83	41	76	3
5	D	58	54	66	4
6	E	73	56	86	5
7	F	56	84	79	6
8	G	92	54	60	7
9	H	48	73	73	8
10	I	57	38	62	9
11					1
12					2
13					3
14					4
15					5
16					6
17					7
18					8
19					9

Select the entire Data in Column E and click on the Data menu and click on the Sort button which will open the Sort Warning window. Select the option and click on the Sort button as shown in the below picture

This will open the Sort window and click on the Sort by Dropdown list and select Column E as shown in the below picture

The Order will automatically change to Smallest to largest and Click on the OK button as shown in the below picture

This will place the numbers in the Ascending order thereby creating blank rows for the second set of numbers from 1 to 9 as shown in the below picture

	A	B	C	D	E
1	Name	FInAc	FiMa	CosAc	
2	A	49	58	48	1
3					1
4	B	40	92	64	2
5					2
6	C	83	41	76	3
7					3
8	D	58	54	66	4
9					4
10	E	73	56	86	5
11					5
12	F	56	84	79	6
13					6
14	G	92	54	60	7
15					7
16	H	48	73	73	8
17					8
18	I	57	38	62	9
19					9

Using this method, we can add blank rows with the existing Dataset and we can delete the Contents in Column E

35. DEFINE NAME

Create a Dataset as shown in the Picture

	A	B	C
1	Course	Admission Fees	
2	DMO	10	6000
3	DCAP	10	10000
4	DCAT	15	9000
5	HDCAT	15	16000
6	HDCAP	18	18000
7	HDFD	20	24000
8	HDWD	15	18000
9	HDPD	12	16000
10	ADPP	22	10000
11	ADJP	25	12000
12	CCAE	30	10000

Select the Entire Admission data as shown in the below picture

	A	B
1	Course	Admission
2	DMO	10
3	DCAP	10
4	DCAT	15
5	HDCAT	15
6	HDCAP	18
7	HDFD	20
8	HDWD	15
9	HDPD	12
10	ADPP	22
11	ADJP	25
12	CCAE	30

Click on the Formula menu and click on the Create From Selection button as shown in the below picture

This will open the Create From Selection window and select the option as shown in the below picture

Select the entire data in the Fees Column and repeat the same procedures.

In Column D add a new title as Total Amount as shown in the below picture

	A	B	C	D
1	Course	Admission	Fees	Total Amount
2	DMO	10	6000	
3	DCAP	10	10000	
4	DCAT	15	9000	
5	HDCAT	15	16000	
6	HDCAP	18	18000	
7	HDFD	20	24000	
8	HDWD	15	18000	
9	HDPD	12	16000	
10	ADPP	22	10000	
11	ADJP	25	12000	
12	CCAE	30	10000	

Click on the D2 Cell and type the formula as shown in the below picture

After typing the formula if we press the Enter key in the Key board the Total Amount for all the Courses will be calculated and filled in the rows accordingly.

When we create names all the cell under the Admission title and Fees title will be included and we can view it by clicking the Name Manager

window. We can open the Name Manager window by clicking the Name Manager button in the Formula menu as shown in the below picture

36. SUM BY NAME MANAGER

Create a Dataset as shown in the below picture

	A	B	C
1	Product	City	Sales
2	Samsung	Chennai	184
3	Oppo	Chennai	195
4	Vivo	Chennai	196
5	Oneplus	Chennai	163
6	Redmi	Chennai	174
7	Realme	Chennai	199
8	iPhone	Chennai	175
9	Samsung	Madurai	178
10	Oppo	Madurai	181
11	Vivo	Madurai	178
12	Oneplus	Madurai	158
13	Redmi	Madurai	167
14	Realme	Madurai	155
15	iPhone	Madurai	190
16	Samsung	Nellai	183
17	Oppo	Nellai	152
18	Vivo	Nellai	154
19	Oneplus	Nellai	198
20	Redmi	Nellai	156
21	Realme	Nellai	179
22	iPhone	Nellai	161

Select the Sales for Chennai and change the Cell background color as shown in the below picture

	A	B	C
1	Product	City	Sales
2	Samsung	Chennai	184
3	Oppo	Chennai	195
4	Vivo	Chennai	196
5	Oneplus	Chennai	163
6	Redmi	Chennai	174
7	Realme	Chennai	199
8	iPhone	Chennai	175
9	Samsung	Madurai	178
10	Oppo	Madurai	181
11	Vivo	Madurai	178
12	Oneplus	Madurai	158
13	Redmi	Madurai	167
14	Realme	Madurai	155
15	iPhone	Madurai	190
16	Samsung	Nellai	183
17	Oppo	Nellai	152
18	Vivo	Nellai	154
19	Oneplus	Nellai	198
20	Redmi	Nellai	156
21	Realme	Nellai	179
22	iPhone	Nellai	161

Repeat the same procedures for Madurai and Nellai also but Fill the Cell background with different colors as shown in the below picture

	A	B	C
1	Product	City	Sales
2	Samsung	Chennai	184
3	Oppo	Chennai	195
4	Vivo	Chennai	196
5	Oneplus	Chennai	163
6	Redmi	Chennai	174
7	Realme	Chennai	199
8	iPhone	Chennai	175
9	Samsung	Madurai	178
10	Oppo	Madurai	181
11	Vivo	Madurai	178
12	Oneplus	Madurai	158
13	Redmi	Madurai	167
14	Realme	Madurai	155
15	iPhone	Madurai	190
16	Samsung	Nellai	183
17	Oppo	Nellai	152
18	Vivo	Nellai	154
19	Oneplus	Nellai	198
20	Redmi	Nellai	156
21	Realme	Nellai	179
22	iPhone	Nellai	161

Now Select Chennai and click on Formula menu and click on Name Manager which will open the Name Manager window. Click on the New button and type the Name as shown in the below picture

New Name

Name: Green

Scope: Workbook

Comment:

Refers to: =Sheet1!\$C\$2:\$C\$8

OK Cancel

Now Select Madurai and click on the New button and type the Name as shown in the below picture

The 'New Name' dialog box is shown with the following details:

- Name:** Orange
- Scope:** Workbook
- Comment:** (Empty text box)
- Refers to:** =Sheet1!\$C\$9:\$C\$15
- Buttons:** OK, Cancel

Now Select Nellai and click on the New button and type the Name as shown in the below picture

The 'New Name' dialog box is shown with the following details:

- Name:** Blue
- Scope:** Workbook
- Comment:** (Empty text box)
- Refers to:** =Sheet1!\$C\$16:\$C\$22
- Buttons:** OK, Cancel

The Name Manager window should look as shown in the below picture

The Name Manager window displays the following defined names:

Name	Value	Refers To	Scope
Blue	{"183","152","154","198","156","179","161"}	=Sheet1!\$C\$16:\$C\$22	Workbook
Green	{"184","195","196","163","174","199","175"}	=Sheet1!\$C\$2:\$C\$8	Workbook
Orange	{"178","181","178","158","167","155","190"}	=Sheet1!\$C\$9:\$C\$15	Workbook

Now click on the Cell D8 and type the formula as shown in the below picture

	A	B	C	D	E
1	Product	City	Sales		
2	Samsung	Chennai	184		
3	Oppo	Chennai	195		
4	Vivo	Chennai	196		
5	Oneplus	Chennai	163		
6	Redmi	Chennai	174		
7	Realme	Chennai	199		
8	iPhone	Chennai	175	=SUM(Green)	
9	Samsung	Madurai	178		
10	Oppo	Madurai	181		
11	Vivo	Madurai	178		
12	Oneplus	Madurai	158		
13	Redmi	Madurai	167		
14	Realme	Madurai	155		
15	iPhone	Madurai	190		
16	Samsung	Nellai	183		
17	Oppo	Nellai	152		
18	Vivo	Nellai	154		
19	Oneplus	Nellai	198		
20	Redmi	Nellai	156		
21	Realme	Nellai	179		
22	iPhone	Nellai	161		

When you press the Enter key after typing the formula it will calculate the sum of numbers with Green Fill as shown in the below picture

	A	B	C	D
1	Product	City	Sales	
2	Samsung	Chennai	184	
3	Oppo	Chennai	195	
4	Vivo	Chennai	196	
5	Oneplus	Chennai	163	
6	Redmi	Chennai	174	
7	Realme	Chennai	199	
8	iPhone	Chennai	175	1286
9	Samsung	Madurai	178	
10	Oppo	Madurai	181	
11	Vivo	Madurai	178	
12	Oneplus	Madurai	158	
13	Redmi	Madurai	167	
14	Realme	Madurai	155	
15	iPhone	Madurai	190	
16	Samsung	Nellai	183	
17	Oppo	Nellai	152	
18	Vivo	Nellai	154	
19	Oneplus	Nellai	198	
20	Redmi	Nellai	156	
21	Realme	Nellai	179	
22	iPhone	Nellai	161	

Now click on the Cell D15 and type the formula as shown in the below picture

	A	B	C	D
1	Product	City	Sales	
2	Samsung	Chennai	184	
3	Oppo	Chennai	195	
4	Vivo	Chennai	196	
5	Oneplus	Chennai	163	
6	Redmi	Chennai	174	
7	Realme	Chennai	199	
8	iPhone	Chennai	175	1286
9	Samsung	Madurai	178	
10	Oppo	Madurai	181	
11	Vivo	Madurai	178	
12	Oneplus	Madurai	158	
13	Redmi	Madurai	167	
14	Realme	Madurai	155	
15	iPhone	Madurai	190	
16	Samsung	Nellai	183	
17	Oppo	Nellai	152	
18	Vivo	Nellai	154	
19	Oneplus	Nellai	198	
20	Redmi	Nellai	156	
21	Realme	Nellai	179	
22	iPhone	Nellai	161	

When you press the Enter key after typing the formula it will calculate the sum of numbers with Orange Fill as shown in the below picture

	A	B	C	D
1	Product	City	Sales	
2	Samsung	Chennai	184	
3	Oppo	Chennai	195	
4	Vivo	Chennai	196	
5	Oneplus	Chennai	163	
6	Redmi	Chennai	174	
7	Realme	Chennai	199	
8	iPhone	Chennai	175	1286
9	Samsung	Madurai	178	
10	Oppo	Madurai	181	
11	Vivo	Madurai	178	
12	Oneplus	Madurai	158	
13	Redmi	Madurai	167	
14	Realme	Madurai	155	
15	iPhone	Madurai	190	1207
16	Samsung	Nellai	183	
17	Oppo	Nellai	152	
18	Vivo	Nellai	154	
19	Oneplus	Nellai	198	
20	Redmi	Nellai	156	
21	Realme	Nellai	179	
22	iPhone	Nellai	161	

Now click on the Cell D22 and type the formula as shown in the below picture

	A	B	C	D
1	Product	City	Sales	
2	Samsung	Chennai	184	
3	Oppo	Chennai	195	
4	Vivo	Chennai	196	
5	Oneplus	Chennai	163	
6	Redmi	Chennai	174	
7	Realme	Chennai	199	
8	iPhone	Chennai	175	1286
9	Samsung	Madurai	178	
10	Oppo	Madurai	181	
11	Vivo	Madurai	178	
12	Oneplus	Madurai	158	
13	Redmi	Madurai	167	
14	Realme	Madurai	155	
15	iPhone	Madurai	190	1207
16	Samsung	Nellai	183	
17	Oppo	Nellai	152	
18	Vivo	Nellai	154	
19	Oneplus	Nellai	198	
20	Redmi	Nellai	156	
21	Realme	Nellai	179	
22	iPhone	Nellai	161	=SUM(Blue)

When you press the Enter key after typing the formula it will calculate the sum of numbers with Blue Fill as shown in the below picture

	A	B	C	D
1	Product	City	Sales	
2	Samsung	Chennai	184	
3	Oppo	Chennai	195	
4	Vivo	Chennai	196	
5	Oneplus	Chennai	163	
6	Redmi	Chennai	174	
7	Realme	Chennai	199	
8	iPhone	Chennai	175	1286
9	Samsung	Madurai	178	
10	Oppo	Madurai	181	
11	Vivo	Madurai	178	
12	Oneplus	Madurai	158	
13	Redmi	Madurai	167	
14	Realme	Madurai	155	
15	iPhone	Madurai	190	1207
16	Samsung	Nellai	183	
17	Oppo	Nellai	152	
18	Vivo	Nellai	154	
19	Oneplus	Nellai	198	
20	Redmi	Nellai	156	
21	Realme	Nellai	179	
22	iPhone	Nellai	161	1183

37. CREATING DEPENDENT DROPDOWN LIST

Create a Dataset as shown in the Picture

	A	B	C	D	E
1	Basic	Programming	Web	Accounting	DV
2	Notepad	C	HTML	Tally	Power BI
3	Wordpad	C++	CSS	Zoho	TableAu
4	Wordpad	Java	JS		Knime
5	Powerpoint	Python	RJS		Matplotlib
6	Excel		NJS		R studio
7			AJS		

Create the headings in the Cells B10 and D10 as shown in the below picture

	A	B	C	D	E
1	Basic	Programming	Web	Accounting	DV
2	Notepad	C	HTML	Tally	Power BI
3	Wordpad	C++	CSS	Zoho	TableAu
4	Wordpad	Java	JS		Knime
5	Powerpoint	Python	RJS		Matplotlib
6	Excel		NJS		R studio
7			AJS		
8					
9					
10		Course		Topics	

Select B11 cell and click on the Data menu and click on Data Validation and click the list and after clicking on the source select A1 to E1 and click on the OK button as shown in the below picture

Data Validation

Settings Input Message Error Alert

Validation criteria

Allow: List

Data: between

Source: =\$A\$1:\$E\$1

☒ Ignore blank

☒ In-cell dropdown

☐ Apply these changes to all other cells with the same settings

Clear All OK Cancel

If you click on B11 it will display the headings inside the list as shown in the below picture

Select the entire Dataset from Cells A1 to E7 and click on Formula menu and click on Create from Selection button and select the option and click on the OK button as shown in the below picture

Click on the Name Manager button to open the window as shown in the below picture.

Click on Accounting in the Name Manager and click on the Edit button because the Accounting Column has got data in the Cells D2 and D3 only. But it has got the cells selected till D7. To change this, we need to click on

the Edit Button and change the options and click on the OK button as shown in the below picture

Except the Web Select Other Names and change the range till the cells that has the data in that particular column and click on the Close button as shown in the below picture

Click on D11 cell and go to Data menu and click on Data Validation button and in the Data validation window click on list and in the Source type the following syntax and click on the OK button as shown in the below picture

In B11 list whatever Course title is selected the D11 list will display the topics on only those selected Course as shown in the below picture

Course		Topics
	Basic	Notepad Wordpad Word Powerpoint Excel

10					
11		Course	Programming	Topics	C C++ Java Python
12					
13					
14					
15					

38. CONSOLIDATE

Consolidate is basically used to do the selected Arithmetic operations for the same set of data from multiple sheets. For e.g. finding the total sales of products from the sales done in the months of April, May and June.

Right click on Sheet1 and select the Rename command and change the sheet the name to April similarly add three more sheets and rename them as May, June and Total as shown in the below picture

Create a Dataset in April, May and June as shown in the below pictures

	A	B	C		A	B	C
1				1			
2		Product	Sold	2		Product	Sold
3		Mouse	61	3		Mouse	107
4		Keyboard	73	4		Keyboard	86
5		RAM	69	5		RAM	92
6		Pen Drive	59	6		Pen Drive	109
7		Laptop	68	7		Laptop	92

	A	B	C
1			
2		Product	Sold
3		Mouse	126
4		Keyboard	121
5		RAM	138
6		Pen Drive	128
7		Laptop	94

In the Total worksheet click on Cell B2 and click on Data menu and click on the Consolidate button to open the Consolidate window.

Click on the Up arrow next to the reference and select the Data from April worksheet from B2 to C7 and then click on the Add button and select the Data from worksheets May and June also. The Consolidate window

should be looking and click on the OK button as shown in the below picture

Consolidate

Function:
Sum

Reference:
|

All references:
April!\$B\$2:\$C\$7
June!\$B\$2:\$C\$7
May!\$B\$2:\$C\$7

Use labels in
☒ Top row
☒ Left column
☐ Create links to source data

OK Close

This will create the Total sales done for the products in all the 3 months and the output will be as shown in the below picture

	A	B	C
1			
2		Name	Sold
3		Mouse	294
4		Keyboard	280
5		RAM	299
6		Pen Drive	296
7		Laptop	254

39. GOAL SEEK

What if analysis is basically used to predict a result based on the analysis done with the existing Data.

Goal Seek is used to find out an expected result analyzing the existing Data. To use Goal Seek we need to select a Cell that has a value obtained out of a Formula.

Create a Dataset as shown in the below picture

	A	B	C
1	Adnission	Fees	Total Amount
2	10	12000	120000

To obtain the Total Amount value type the formula in the formula bar as shown in the below picture

The image shows the Excel formula bar. On the left, the cell reference 'C2' is displayed next to a dropdown arrow. To the right of the cell reference are icons for undo (X), redo (checkmark), and the formula icon (fx). Further right, the formula '=A2*B2' is entered.

Click on C2 Cell and click on the Data menu and in What-If Analysis click on Goal Seek as shown in the below picture

The Goal Seek window will open as shown in the below picture

Now the Prediction has to be done for number of admissions to be made based on the Total Amount collected. So, fix the options in the Goal Seek window and click on the OK button as shown in the below picture

This will change the Total Amount value to 180000 and will reverse the formula to predict the number of admissions to be made to achieve the Total Amount as shown in the below picture

It will show us that 15 Admissions have to be made if we want the Total Amount collected to be 180000. Similarly, we can check with any other Total amounts also as shown in the below picture

The image shows an Excel spreadsheet with the following data:

	A	B	C
1	Adnission	Fees	Total Amount
2	20	12000	240000

Two dialog boxes are overlaid on the spreadsheet:

- Goal Seek** dialog box:
 - Set cell: C2
 - To value: 240000
 - By changing cell: \$A\$2
 - Buttons: OK, Cancel
- Goal Seek Status** dialog box:
 - Message: Goal Seeking with Cell C2 found a solution.
 - Target value: 240000
 - Current value: 240000
 - Buttons: Step, Pause, OK, Cancel

If we want the Total Amount collected to be 240000, we need to have 20 Admissions. This is how the Goal Seek works.

40. SCENARIO MANAGER

Scenario Manager is basically used to create multiple scenarios predicting the result by analyzing the existing Data. We can say that it is Multiple Goal Seek in a single window. Create a Dataset as shown in the below picture

	A	B	C
1	Adnission	Fees	Total Amount
2	10	12000	120000

When working on Scenario Manager we need to click on the cell that has to be changed constantly. In this exercise we are going to change the number of admissions so we need to click on the A2 cell and click Data menu and click on the What-If Analysis and select Scenario Manager as shown in the below picture

This will open the Scenario Manager window as shown in the below picture

We need to click on the Add button which will open the Add Scenario window and we need to give a name and fix the options as shown in the below picture

Dialog box titled "Edit Scenario".

Scenario name: 10admns

Changing cells: \$A\$2

Ctrl+click cells to select non-adjacent changing cells.

Comment:

Protection

☒ Prevent changes

☐ Hide

OK Cancel

When we click on the OK button it will open a new window named Scenario Value and, in this window, change the option and click on the Add button as shown in the below picture

Dialog box titled "Scenario Values".

Enter values for each of the changing cells.

1: \$A\$2 10

OK Cancel

The Same Add Scenario will open and this time set the values and click on the OK button as shown in the below picture

Edit Scenario

Scenario name:
15admns

Changing cells:
\$A\$2

Ctrl+click cells to select non-adjacent changing cells.

Comment:

Protection

☒ Prevent changes
☐ Hide

OK Cancel

This will open the Scenario Value window, set the values and click on the Add button as shown in the below picture

Scenario Values

Enter values for each of the changing cells.

1: \$A\$2 15

OK Cancel

Similarly create multiple scenarios each with 5 more values added in the Scenario values window i.e. we started with 10admns and in the Scenario value A2 was set as 10, then we clicked the Add button and created a scenario named 15admns and clicked on the OK button and set the Value of A2 as 15. So, create scenario names as 20admns with 20 as the value of

A2 cell, then 25admns with 25 as A2 value till 40 with each scenario the value in A2 increased by 5.

At the last stage the Scenario Manager window should look as shown in the below picture

When we select a Scenario name and click on the Show button, the value in the A2 cell changes to what we had set the Scenario value of A2 in that

particular scenario and the Total Amount will change accordingly as shown in the below pictures

	A	B	C	D	E
1	Admissions	Fees	Total Amount		
2	20	12000	240000		
3	Scenario Manager Scenarios: 10admns 15admns 20admns 25admns 30admns 35admns 40admns Add... Delete Edit... Merge... Summary... Changing cells: \$A\$2 Comment: Created by Dell on 08-12-2024 Show Close

41. DATA TABLE

Data table is used to give multiple predictions by analyzing the existing Data. In short, we can say Data Table as Multiple Scenario Managers. Create a Dataset as shown in the below picture

	A	B	C
1	Admissions	Fees	Total Amount
2	10	12000	120000

Create a Dataset structure for the Data Table as shown in the below picture

	A	B	C	D	E	F	G	H
1	Admissions	Fees	Total Amount					
2	10	12000	120000					
3								
4								
5								
6		12000	13000	14000	15000	16000	17000	18000
7	10							
8	15							
9	20							
10	25							
11	30							
12	35							
13	40							
14	45							
15	50							
16	55							
17	60							

The row cells from A7 to A17 holds the Admission values and the column cells from B6 to H6 holds the fee structure. Data Table will now calculate the Total amount for the same Admission with different Fee structure and calculate Total Amount with Same fees and different Admissions.

We need to click on A6 cell and type the formula for finding the Total Amount i.e. $A2*B2$. Select the cells from A6 to H17 as shown in the below picture

	A	B	C	D	E	F	G	H
1	Admissions	Fees	Total Amount					
2	10	12000	120000					
3								
4								
5								
6	120000	12000	13000	14000	15000	16000	17000	18000
7	10							
8	15							
9	20							
10	25							
11	30							
12	35							
13	40							
14	45							
15	50							
16	55							
17	60							

Click on Data menu and click What-If Analysis and click on Data table which will open the Data Table window. Set the Values in the window and click on the OK button as shown in the below picture

Data Table ? X

Row input cell: \$A\$2 ↑

Column input cell: \$B\$2 ↑

OK Cancel

This will create the Data Table to calculate the Total Amount to be collected with 10 Admission on all fee structures fill from A7 to H7. Similarly, all the Admissions and the Different fee structures will be calculated and filled with corresponding Total Amount values from A7 to H17 as shown in the below picture

	A	B	C	D	E	F	G	H
1	Admissions	Fees	Total Amount					
2	10	12000	120000					
3								
4								
5								
6	120000	12000	13000	14000	15000	16000	17000	18000
7	10	120000	130000	140000	150000	160000	170000	180000
8	15	180000	195000	210000	225000	240000	255000	270000
9	20	240000	260000	280000	300000	320000	340000	360000
10	25	300000	325000	350000	375000	400000	425000	450000
11	30	360000	390000	420000	450000	480000	510000	540000
12	35	420000	455000	490000	525000	560000	595000	630000
13	40	480000	520000	560000	600000	640000	680000	720000
14	45	540000	585000	630000	675000	720000	765000	810000
15	50	600000	650000	700000	750000	800000	850000	900000
16	55	660000	715000	770000	825000	880000	935000	990000
17	60	720000	780000	840000	900000	960000	1020000	1080000

42. SOLVER

Solver is used to Predict results by analyzing the existing Data. Create a Dataset as shown in the below picture

	A	B	C	D
1	Course	Admission	Fees	Total Amount
2	DMO	10	6000	60000
3	DCAT	15	12000	180000
4	DCAP	12	12000	144000
5	HDCAT	10	20000	200000
6	HDCAP	20	20000	400000
7	ADPP	18	14000	252000
8	ADJP	15	14000	210000
9	HDFD	12	24000	288000
10	HDWD	16	22000	352000
11	HDJD	18	21000	378000
12	CCAE	20	9000	180000
13	HDCC	14	30000	420000
14	HDBD	20	30000	600000

The total amount for each course is calculated using the formula as shown in the below picture

The formula typed in D2 cell will fetch the value for the Total Amount. Drag it till D14 it will fetch the values of the Total Amount of all the courses.

Click on C18 and type the title as Total and click on D18 and type the Formula as shown in the below picture

This will be the Grand total of the Total Amount of all the courses as shown in the below picture

	A	B	C	D
1	Course	Admission	Fees	Total Amount
2	DMO	10	6000	60000
3	DCAT	15	12000	180000
4	DCAP	12	12000	144000
5	HDCAT	10	20000	200000
6	HDCAP	20	20000	400000
7	ADPP	18	14000	252000
8	ADJP	15	14000	210000
9	HDFD	12	24000	288000
10	HDWD	16	22000	352000
11	HDJD	18	21000	378000
12	CCAE	20	9000	180000
13	HDCC	14	30000	420000
14	HDBD	20	30000	600000
15				
16				
17				
18			Total	3664000

In this example we have a Grand Total of 36,64,000. If we want the Grand Total to be 45,00,000 Solver will provide us the solution like how many admissions have to be made in each of the course to achieve that Grand Total value.

Click on File menu and click on the Option command which will open the Excel options window. Click on the Add-ins option which will show the Add-ins as show in the below picture

Click on the Go button situated next to Manage Excel Add-ins as shown in the below picture

Manage: Excel Add-ins Go...

This will open the Add-ins Window. Enable the Solver and click on the OK button as shown in the below picture

This will add the Solver in the Data menu as shown in the below picture

Click on D18 cell where the Grand Total value has been calculated. Click on the Solver button which will open the Solver window and fix the options in the solver window as shown in the below picture.

Here D18 is the cell that should have a value of 45,00,000 and the cells that should change the values are the number of admissions that are situated from B2 to B14.

Then in the same click on the Add button under Subject to Constraints heading which will open the Add Constraint window and set the options and click on the OK button as shown in the below picture

This will control the solver that the values in B2 to B14 should be whole numbers only without any decimals. The Solver window will look as shown in the below picture

Click on the Solve button and it will calculate and show how many admissions in each course has to be made as shown in the below picture

	A	B	C	D
1	Course	Admission	Fees	Total Amount
2	DMO	10	6000	60000
3	DCAT	0	12000	0
4	DCAP	0	12000	0
5	HDCAT	0	20000	0
6	HDCAP	0	20000	0
7	ADPP	0	14000	0
8	ADJP	0	14000	0
9	HDFD	0	24000	0
10	HDWD	0	22000	0
11	HDJD	0	21000	0
12	CCAE	0	9000	0
13	HDCC	1	30000	30000
14	HDBD	147	30000	4410000
15				
16				
17				
18			Total	4500000

The Solver window will now open a new window named Solver Result in which we need to set the options as shown in the below picture

Solver Results

Solver found an integer solution within tolerance. All Constraints are satisfied.

☐ KeeP Solver Solution
☒ Restore Original Values

☐ Return to Solver Parameters Dialog
 ☐ Outline Reports

Reports

Answer

Reports

Creates the type of report that you specify, and places each report on a separate sheet in the workbook

OK Cancel Save Scenario...

This will change back to our old Admission counts and will create a new worksheet in the name of where the old Admission counts and the new Admission count will be listed as shown in the below picture

Objective Cell (Value Of)

Cell	Name	Original Value	Final Value
\$D\$18	Total Total Amount	3664000	4500000

Variable Cells

Cell	Name	Original Value	Final Value	Integer
\$B\$2	DMO Admission	10	10	Integer
\$B\$3	DCAT Admission	15	0	Integer
\$B\$4	DCAP Admission	12	0	Integer
\$B\$5	HDCAT Admission	10	0	Integer
\$B\$6	HDCAP Admission	20	0	Integer
\$B\$7	ADPP Admission	18	0	Integer
\$B\$8	ADJP Admission	15	0	Integer
\$B\$9	HDFD Admission	12	0	Integer
\$B\$10	HDWD Admission	16	0	Integer
\$B\$11	HDJD Admission	18	0	Integer
\$B\$12	CCAEE Admission	20	0	Integer
\$B\$13	HDCC Admission	14	1	Integer
\$B\$14	HDBD Admission	20	147	Integer

43. SUBSTITUTE

Create a Dataset as shown in the below picture

	A	B
1	Name	Changed Name
2	a.	
3	b.	
4	c.	
5	d.	
6	e.	
7	f.	
8	g.	
9	h.	
10	i.	
11	j.	
12	k.	
13	l.	
14	m.	
15	n.	
16	o.	
17	p.	
18	q.	
19	r.	

Now instead of the dot next the names we are going to replace it with) bracket using the formula

Click on the B2 cell and type the formula as shown in the below picture

Now drag the bottom right corner of B2 cell it will fill the contents automatically till B19 and the substitution for dot with the brackets would be done as shown in the below picture

	A	B
1	Name	Changed Name
2	a.	a)
3	b.	b)
4	c.	c)
5	d.	d)
6	e.	e)
7	f.	f)
8	g.	g)
9	h.	h)
10	i.	i)
11	j.	j)
12	k.	k)
13	l.	l)
14	m.	m)
15	n.	n)
16	o.	o)
17	p.	p)
18	q.	q)
19	r.	r)

44. SMALL FUNCTION

The Small function is used to find the smallest values in the selected set of data. Using this function, we can find the smallest or the second smallest or the third smallest and so on.

Create a Dataset as shown in the below picture

	A	B
1	Name	Test1
2	A	57
3	B	29
4	C	28
5	D	72
6	E	65
7	F	20
8	G	75
9	H	68
10	I	19
11	J	57
12	K	82
13	L	58
14	M	67
15	N	78
16	O	39
17	P	53
18	Q	22
19	R	23

Click on the Cell C2 and type the formula in the formula bar as shown in the below picture

C2 X ✓ f_x =SMALL(B2:B19,1)

This will display the smallest value from the selected cells i.e. from B2 to B19 as shown in the below picture

	A	B	C
1	Name	Test1	
2	A	57	19
3	B	29	
4	C	28	
5	D	72	
6	E	65	
7	F	20	
8	G	75	
9	H	68	
10	I	19	
11	J	57	
12	K	82	
13	L	58	
14	M	67	
15	N	78	
16	O	39	
17	P	53	
18	Q	22	
19	R	23	

Click on the D2 Cell and type the formula in the formula bar as shown in the below picture

This will display the second smallest value from the selected cells i.e. from B2 to B19 as shown in the below picture

	A	B	C	D
1	Name	Test1		
2	A	57	19	20
3	B	29		
4	C	28		
5	D	72		
6	E	65		
7	F	20		
8	G	75		
9	H	68		
10	I	19		
11	J	57		
12	K	82		
13	L	58		
14	M	67		
15	N	78		
16	O	39		
17	P	53		
18	Q	22		
19	R	23		

45. LARGE FUNCTION

This is just the opposite of small function. It displays the Largest number in the selected set of numbers. Using this function, we can find the largest or the second largest or the third largest and so on.

Create a Dataset as shown in the below picture

	A	B
1	Name	Test1
2	A	57
3	B	29
4	C	28
5	D	72
6	E	65
7	F	20
8	G	75
9	H	68
10	I	19
11	J	57
12	K	82
13	L	58
14	M	67
15	N	78
16	O	39
17	P	53
18	Q	22
19	R	23

Click on the Cell C2 and type the formula in the formula bar as shown in the below picture

This will display the highest number out of B2 to B19 in the cell C2 as shown in the below picture

	A	B	C
1	Name	Test1	
2	A	57	82
3	B	29	
4	C	28	
5	D	72	
6	E	65	
7	F	20	
8	G	75	
9	H	68	
10	I	19	
11	J	57	
12	K	82	
13	L	58	
14	M	67	
15	N	78	
16	O	39	
17	P	53	
18	Q	22	
19	R	23	

Click on the D2 Cell and type the formula in the formula bar as shown in the below picture

This will display the second largest value from the selected cells i.e. from B2 to B19 as shown in the below picture

	A	B	C	D
1	Name	Test1		
2	A	57	82	78
3	B	29		
4	C	28		
5	D	72		
6	E	65		
7	F	20		
8	G	75		
9	H	68		
10	I	19		
11	J	57		
12	K	82		
13	L	58		
14	M	67		
15	N	78		
16	O	39		
17	P	53		
18	Q	22		
19	R	23		

46. DATE CONVERSION

Create a title in the A1 cell as Date and in B1 cell as month and in C1 cell as Day. It should be like as shown in the below picture

	A	B	C
1	Date	Month	Day
2			

Select 20 cells in Column A for generating random Dates. We could generate random dates using RandBetween function and Date function.

We can create random dates using these two functions in two methods. In the first method we can use Date function inside the RandBetween function. Select the cells from A2 to A21 and in the formula bar type the formula as shown in the below picture

Here RandBetween is fixed outside and we are using the first date function for the starting date and second date function for the ending date. When we press the Enter key in the keyboard the random dates will be generated as numbers as shown in the below picture

	A	B	C
1	Date	Month	Day
2	45518		
3	45446		
4	45363		
5	45654		
6	45626		
7	45528		
8	45529		
9	45373		
10	45297		
11	45381		
12	45314		

With the cells A2 to A21 still in selection click on the down arrow in the number section and change the category from number to date. This will change the numbers to Date as shown in the below picture

	A	B	C
1	Date	Month	Day
2	14-08-2024		
3	03-06-2024		
4	12-03-2024		
5	28-12-2024		
6	30-11-2024		
7	24-08-2024		
8	25-08-2024		
9	22-03-2024		
10	06-01-2024		
11	30-03-2024		
12	23-01-2024		
13	23-04-2024		
14	04-02-2024		
15	07-07-2024		
16	30-05-2024		
17	26-07-2024		
18	01-08-2024		
19	26-12-2024		
20	30-01-2024		
21	28-09-2024		

We need to make these Dates as static because when it would be in RandBetween function it keeps on changing. To avoid that we need to convert it in to static date. Click on Copy button and click on the downward triangle under paste and select the Paste Values. This will remove the dates from RandBetween function and make it static.

Let's use the second method where Date function will be outside and RandBetween function inside.

Select the cells D2 to D21 and in the formula bar type the formula as shown in the below picture

D2	▼	:	✕	✓	<i>fx</i>	=DATE(2024,RANDBETWEEN(1,12),RANDBETWEEN(1,31))
----	---	---	---	---	-----------	---

This will create the random dates from D2 to D21 with the Date format. The output will be generated in Date format itself as shown in the below picture.

D
18-12-2024
26-11-2024
13-11-2024
21-07-2024
12-03-2024
21-03-2024
20-11-2024
04-09-2024
06-11-2024
22-10-2024
18-02-2024
29-11-2024
20-11-2024
09-11-2024
26-06-2024
30-06-2024
05-11-2024
06-04-2024
29-05-2024
10-12-2024

These are the two methods we can use to generate random dates.

Click on the Cell B2 and in the Formula bar type the formula and press the Enter key in the keyboard as shown in the below picture

Based on the date B2 will display the month of the date. Go to the bottom right corner of the cell and drag it till B21 where it will display the months of the corresponding dates as shown in the below picture

	A	B
1	Date	Month
2	11-12-2024	December
3	15-07-2024	July
4	18-12-2024	December
5	02-06-2024	June
6	25-11-2024	November
7	26-07-2024	July
8	19-02-2024	February
9	21-10-2024	October
10	05-02-2024	February
11	06-05-2024	May
12	12-04-2024	April
13	27-03-2024	March
14	19-03-2024	March
15	15-08-2024	August
16	09-09-2024	September
17	12-08-2024	August
18	14-03-2024	March
19	19-02-2024	February
20	05-07-2024	July
21	19-10-2024	October

Click on the Cell C2 and in the Formula bar type the formula and press the Enter key in the keyboard as shown in the below picture

C2	⌵	⋮	✗ ✓ <i>fx</i>	=TEXT(A2,"dddd")
----	---	---	---------------	------------------

Based on the date C2 will display the day of the date. Go to the bottom right corner of the cell and drag it till C21 where it will display the days of the corresponding dates as shown in the below picture

	A	B	C
1	Date	Month	Day
2	11-12-2024	December	Wednesday
3	15-07-2024	July	Monday
4	18-12-2024	December	Wednesday
5	02-06-2024	June	Sunday
6	25-11-2024	November	Monday
7	26-07-2024	July	Friday
8	19-02-2024	February	Monday
9	21-10-2024	October	Monday
10	05-02-2024	February	Monday
11	06-05-2024	May	Monday
12	12-04-2024	April	Friday
13	27-03-2024	March	Wednesday
14	19-03-2024	March	Tuesday
15	15-08-2024	August	Thursday
16	09-09-2024	September	Monday
17	12-08-2024	August	Monday
18	14-03-2024	March	Thursday
19	19-02-2024	February	Monday
20	05-07-2024	July	Friday
21	19-10-2024	October	Saturday

47. DATE DIFFERENCE

Create a Dataset with dates as explained in the previous examples. The Dataset should look as shown in the below picture.

	A	B
1	Emp	DOB
2	A	06-03-1983
3	B	24-12-1996
4	C	11-10-2000
5	D	23-02-1980
6	E	11-02-1985
7	F	06-12-1987
8	G	02-03-1996
9	H	26-05-1984
10	I	17-05-1981
11	J	16-11-1995
12	K	03-02-1998
13	L	09-04-2000
14	M	20-05-1986
15	N	10-02-1998
16	O	04-12-1989
17	P	11-02-1984
18	Q	31-12-1980
19	R	01-04-1981
20	S	25-01-1980
21	T	12-08-2000
22	U	26-01-2000
23	V	31-08-1992
24	W	21-11-1992
25	X	07-08-1983
26	Y	21-12-1983
27	Z	02-12-1995

Click on the C1 Cell and type the title as Age as shown in the below picture

	A	B	C
1	Emp	DOB	Age

Click on the C2 cell and type the Formula as shown in the below picture

Move the mouse to the bottom right corner of the C2 Cell and drag it till C27 it will create display the Age of the Employees as shown in the below picture

	A	B	C
1	Emp	DOB	Age
2	A	06-03-1983	41
3	B	24-12-1996	27
4	C	11-10-2000	24
5	D	23-02-1980	44
6	E	11-02-1985	39
7	F	06-12-1987	37
8	G	02-03-1996	28
9	H	26-05-1984	40
10	I	17-05-1981	43
11	J	16-11-1995	29
12	K	03-02-1998	26
13	L	09-04-2000	24
14	M	20-05-1986	38
15	N	10-02-1998	26
16	O	04-12-1989	35
17	P	11-02-1984	40
18	Q	31-12-1980	43
19	R	01-04-1981	43
20	S	25-01-1980	44
21	T	12-08-2000	24
22	U	26-01-2000	24
23	V	31-08-1992	32
24	W	21-11-1992	32
25	X	07-08-1983	41
26	Y	21-12-1983	40
27	Z	02-12-1995	29

The DATEDIF is the contraction of Date difference where the function finds the date difference by subtracting the current system date with the dates in the B Column and displays the difference in the C Column in year format.

48. AGGREGATE

Aggregate is used to perform arithmetic functions like finding the Sum, Average, Min, Max etc. even when there are irrelevant values in a sequence of numerical values. Create a Dataset as shown in the below picture

	A	B	C	D
1	Product	sales	Price	Total
2	TV	15	15000	
3	WM	18	9500	
4	DW	NA	17000	
5	AC	NA	39500	
6	Fridge	12	12800	
7	WP	20	6000	

Now click on the Cell D2 and type the formula and press the Enter key in the Keyboard as shown in the below picture

The image shows the Excel formula bar with the text 'SUM' in a dropdown menu, a list icon, a red 'X' icon, a green checkmark icon, and the formula 'fx =b2*c2'.

Take the mouse pointer to the bottom right corner of Cell D2 and drag it till D7 which will fill the Total values as shown in the below picture

	A	B	C	D
1	Product	sales	Price	Total
2	TV	15	15000	225000
3	WM	18	9500	171000
4	DW	NA	17000	#VALUE!
5	AC	NA	39500	#VALUE!
6	Fridge	12	12800	153600
7	WP	20	6000	120000

Click on the Cell C10 and create the title as shown in the below picture

	A	B	C	D
1	Product	sales	Price	Total
2	TV	15	15000	225000
3	WM	18	9500	171000
4	DW	NA	17000	#VALUE!
5	AC	NA	39500	#VALUE!
6	Fridge	12	12800	153600
7	WP	20	6000	120000
8				
9				
10			Amount	

Click on the Cell D10 and type the formula as shown in the below picture

D10 =AGGREGATE(9,3,D2:D7)

In this 9 is to find the sum of the selected range i.e. from D2 to D7 and 3 is to ignore any value errors occurring in this sequence of numerical values. When we press the Enter key in the keyboard it ignores the content in Cells D4 and D5 and then finds the sum of the other cells and will display the Sum of the selected Range as shown in the below picture

	A	B	C	D
1	Product	sales	Price	Total
2	TV	15	15000	225000
3	WM	18	9500	171000
4	DW	NA	17000	#VALUE!
5	AC	NA	39500	#VALUE!
6	Fridge	12	12800	153600
7	WP	20	6000	120000
8				
9				
10			Amount	669600

49. SORT

Sort is used to set the dataset either in Ascending order or descending order with the selected column values.

Create a Dataset as shown in the below picture

	A	B	C	D
1	Name	Test1	Test2	Test3
2	A	57	50	41
3	B	29	41	57
4	C	28	75	56
5	D	72	24	66
6	E	65	24	60
7	F	20	47	41
8	G	75	87	85
9	H	68	51	43
10	I	19	52	31
11	J	57	27	30
12	K	82	61	71
13	L	58	40	17
14	M	67	52	87
15	N	78	53	49
16	O	39	17	34
17	P	53	65	82
18	Q	22	40	48
19	R	23	50	44
20	S	16	88	86
21	T	68	30	77

Create titles in the cells F1, G1, H1 and I1 as shown in the below picture

	A	B	C	D	E	F	G	H	I
1	Name	Test1	Test2	Test3		Name	Test1	Test2	Test3

Click on the Cell F2 and type the sort formula as shown in the below picture

This will sort the data in the Ascending order as shown in the below picture

	A	B	C	D	E	F	G	H	I
1	Name	Test1	Test2	Test3		Name	Test1	Test2	Test3
2	A	57	50	41		O	39	17	34
3	B	29	41	57		D	72	24	66
4	C	28	75	56		E	65	24	60
5	D	72	24	66		J	57	27	30
6	E	65	24	60		T	68	30	77
7	F	20	47	41		L	58	40	17
8	G	75	87	85		Q	22	40	48
9	H	68	51	43		B	29	41	57
10	I	19	52	31		F	20	47	41
11	J	57	27	30		A	57	50	41
12	K	82	61	71		R	23	50	44
13	L	58	40	17		H	68	51	43
14	M	67	52	87		I	19	52	31
15	N	78	53	49		M	67	52	87
16	O	39	17	34		N	78	53	49
17	P	53	65	82		K	82	61	71
18	Q	22	40	48		P	53	65	82
19	R	23	50	44		C	28	75	56
20	S	16	88	86		G	75	87	85
21	T	68	30	77		S	16	88	86

The Sorting done is based on the Values of Test 2 marks in Ascending order. It takes the entire set of data from A2 to D21 and 3 refers to the third column and 1 refers to the Ascending order. It checks the entire Data and Sort the Data in Ascending order with the values of Test 2 marks. If the Sort order has to be in Descending order the value 1 in the last should be changed as -1. We can change the Column as 4 and it will sort in the Ascending order based on the Test 3 marks. If we change the Column number to 2 it will sort the Data based on Test 1 marks.

50. SORTBY

Sortby function is used to Sort the Data based on the Property we select.

Create a Dataset as shown in the below picture

	A	B
1	Name	In Order
2	DHEENPRASATH	
3	AKAASH	
4	BLESSON	
5	BALAMURUGAN	
6	PRAVEENKANTH	
7	KALAIVANI	
8	KUMARASELVAN	
9	KAMALESH	
10	KARTHIK	
11	KARTHIKPRAGA	
12	NANDINI	
13	KARISHMAA	
14	RAMYA	
15	GUNA	
16	PRABHAKARAN	
17	MERZER	
18	MONISH	
19	NAVEENRAJ	
20	KISHORE	
21	ABHINAYA	
22	SUVARSHA	
23	NITHISHKUMAR	
24	SHRAVANTHI	
25	SANTOSHEE	

Click on B2 Cell and type sortby formula as shown in the below picture

B2	▼	:	✕	✓	<i>fx</i>	=SORTBY(A2:A25,LEN(A2:A25),1)
----	---	---	---	---	-----------	-------------------------------

This will sort the text in the Ascending order based on the length of each name in the A column. The name with least character will be the first name and the name with more characters will be the last as shown in the below picture

	A	B
1	Name	In Order
2	DHEENPRASATH	GUNA
3	AKAASH	RAMYA
4	BLESSON	AKAASH
5	BALAMURUGAN	MERZER
6	PRAVEENKANTH	MONISH
7	KALAIVANI	BLESSON
8	KUMARASELVAN	KARTHIK
9	KAMALESH	NANDINI
10	KARTHIK	KISHORE
11	KARTHIKPRAGA	KAMALESH
12	NANDINI	ABHINAYA
13	KARISHMAA	SUVARSHA
14	RAMYA	KALAIVANI
15	GUNA	KARISHMAA
16	PRABHAKARAN	NAVEENRAJ
17	MERZER	SANTOSHEE
18	MONISH	SHRAVANTHI
19	NAVEENRAJ	BALAMURUGAN
20	KISHORE	PRABHAKARAN
21	ABHINAYA	DHEENPRASATH
22	SUVARSHA	PRAVEENKANTH
23	NITHISHKUMAR	KUMARASELVAN
24	SHRAVANTHI	KARTHIKPRAGA
25	SANTOSHEE	NITHISHKUMAR

51. SEQUENCE

The sequence will create the given numbers in the specified column or Columns.

Type the title as S.No. in the A1 cell. Click on A2 Cell and type the formula as shown in the below picture

This will create numbers till 27 in Column A as shown in the below picture

The image shows an Excel spreadsheet. Column A is titled 'S.No' in cell A1. Cells A2 through A27 contain the numbers 1 through 26, respectively. Cell A28 is empty. The numbers 1 through 27 are also listed in the adjacent column B. A large green watermark 'ANIGRA' is visible on the left side of the spreadsheet, and a large blue watermark 'ANIGRA Training Academy' is visible on the right side.

	A	
1	S.No	
2		1
3		2
4		3
5		4
6		5
7		6
8		7
9		8
10		9
11		10
12		11
13		12
14		13
15		14
16		15
17		16
18		17
19		18
20		19
21		20
22		21
23		22
24		23
25		24
26		25
27		26
28		27

If we type the formula as shown in the below picture

It will create serial numbers till 54 in 2 columns i.e. Columns A and B as shown in the below picture

The image shows an Excel spreadsheet with two columns, A and B. Column A is labeled 'S.No' in row 1. Rows 2 through 28 contain serial numbers from 1 to 53 in column A and from 2 to 54 in column B. The formula bar shows =SEQUENCE(27,2).

	A	B
1	S.No	
2	1	2
3	3	4
4	5	6
5	7	8
6	9	10
7	11	12
8	13	14
9	15	16
10	17	18
11	19	20
12	21	22
13	23	24
14	25	26
15	27	28
16	29	30
17	31	32
18	33	34
19	35	36
20	37	38
21	39	40
22	41	42
23	43	44
24	45	46
25	47	48
26	49	50
27	51	52
28	53	54

52. SORT & FILTER FUNCTION

Create a Dataset as shown in the below picture

	A	B
1	SalesMan	Sales
2	A	5076
3	B	3080
4	C	5562
5	D	7094
6	E	3101
7	F	5985
8	G	4810
9	H	11744
10	I	3397
11	J	3046
12	K	2073
13	L	7761
14	M	9977
15	N	6229
16	O	9138
17	P	8385
18	Q	6959
19	R	9151
20	S	6168
21	T	3305
22	U	2203
23	V	9765
24	W	2211
25	X	8757
26	Y	8028
27	Z	11539

The data will be filtered using the Filter function and sorted in Ascending or descending order using the Sort function.

Create the titles in the Cells C1 and F1 and select the Cells C1, D1 and E1 and click on the downward arrow under alignment and under Horizontal change the option as shown in the below picture

Similarly select the cells F1, G1 and H1 and change the alignment as did for the C1 title. The titles will look as shown in the below picture

	A	B	C	D	E	F	G	H
1	SalesMan	Sales	Higher Sales			Lower Sales		

Click on the C2 cell and type the formula as shown in the below picture

This will use the Filter function on the Data available in the Cells A2 to B27 and works on the values in the Cells B2 to B27 where the Large function is used to find the 5 Larger values in the Cell range B2 to B27 which is Column number 2 and 5 larger values will be sorted in the Descending order through the value -1. The output will be as shown in the below picture

	A	B	C	D
1	SalesMan	Sales	Higher Sales	
2	A	5076	H	11744
3	B	3080	Z	11539
4	C	5562	M	9977
5	D	7094	V	9765
6	E	3101	R	9151
7	F	5985		

Click on the F2 cell and type the formula as shown in the below picture

This will use the Filter function on the Data available in the Cells A2 to B27 and works on the values in the Cells B2 to B27 where the Small function is used to find the 5 smaller values in the Cell range B2 to B27 which is Column number 2 and 5 smaller values will be sorted in the Descending order through the value -1. The output will be as shown in the below picture

	A	B	C	D	E	F	G	H
1	SalesMan	Sales	Higher Sales			Lower Sales		
2	A	5076	H	11744		B	3080	
3	B	3080	Z	11539		J	3046	
4	C	5562	M	9977		W	2211	
5	D	7094	V	9765		U	2203	
6	E	3101	R	9151		K	2073	

53. FINDING UNIQUE AND REPEATED DATA

This example uses the Unique, Filter and CountIf functions to find out data appearing only once in the Dataset using the Unique function. Filter and CountIf functions are used to find the repeated data from the Dataset.

Create a Dataset as shown in the below picture

	A	B	C	D
1	Name	Appearing Once	Appearing More than Once	Revised
2	A			
3	B			
4	C			
5	D			
6	E			
7	F			
8	G			
9	H			
10	I			
11	J			
12	K			
13	L			
14	M			
15	E			
16	F			
17	G			
18	H			
19	I			
20	J			
21	K			
22	L			
23	M			
24	N			
25	O			
26	P			
27	Q			
28	R			

Click on the B2 cell and type the Unique formula as shown in the below picture

This will check the Dataset and display the names that are appearing only once in the Dataset as shown in the below picture.

	A	B	C	D
1	Name	Appearing Once	Appearing More than Once	Revised
2	A	A		
3	B	B		
4	C	C		
5	D	D		
6	E	N		
7	F	O		
8	G	P		
9	H	Q		
10	I	R		
11	J			
12	K			
13	L			

Click on the Cell C2 and type the Filter and CountIf formula as shown in the below picture

The formula filters the data using the CountIf function greater than 1 meaning appearing more than once and it shows the names appearing as many times as shown in the below picture

	A	B	C	D
1	Name	Appearing Once	Appearing More than Once	Revised
2	A	A	E	
3	B	B	F	
4	C	C	G	
5	D	D	H	
6	E	N	I	
7	F	O	J	
8	G	P	K	
9	H	Q	L	
10	I	R	M	
11	J		E	
12	K		F	
13	L		G	
14	M		H	
15	E		I	
16	F		J	
17	G		K	
18	H		L	
19	I		M	

Click on the Cell D2 and type the Unique, Filter and CountIf formula as shown in the below picture

D2	⌵	:	✕ ✓ <i>fx</i>	=UNIQUE(FILTER(A2:A28, COUNTIF(A2:A28, A2:A28) > 1))
----	---	---	---------------	--

The Added Unique function displays the Repeated names only once as shown in the below picture

	A	B	C	D
1	Name	Appearing Once	Appearing More than Once	Revised
2	A	A	E	E
3	B	B	F	F
4	C	C	G	G
5	D	D	H	H
6	E	N	I	I
7	F	O	J	J
8	G	P	K	K
9	H	Q	L	L
10	I	R	M	M
11	J		E	
12	K		F	
13	L		G	
14	M		H	
15	E		I	
16	F		J	
17	G		K	
18	H		L	
19	I		M	

54. UPPER AND TRIM

The upper function is used to convert the text into Upper case and the Trim function is used to remove additional space between the text.

Create a Dataset as shown in the below picture

	A	B
1	Name	Changed
2	vasanth kumar	
3	nanda kumar	
4	vasantha balan	
5	bala kumaran	
6	sarath kumar	
7	logesh kumar	
8	mohd. Muzzamil	
9	dhanya thara	
10	maha lakshmi	

Click on the B2 cell and type the formula as shown in the below picture

B2

Take the mouse pointer to the bottom right corner of the B2 cell and drag it till B10 and the text in column A will be displayed as shown in the below picture

	A	B
1	Name	Changed
2	vasanth kumar	VASANTH KUMAR
3	nanda kumar	NANDA KUMAR
4	vasantha balan	VASANTHA BALAN
5	bala kumaran	BALA KUMARAN
6	sarath kumar	SARATH KUMAR
7	logesh kumar	LOGESH KUMAR
8	mohd. Muzzamil	MOHD. MUZZAMIL
9	dhanya thara	DHANYA THARA
10	maha lakshmi	MAHA LAKSHMI

55. PROPER AND TRIM

The Proper function is used to Capitalize every word after the space and the Trim function deletes additional spaces between the text.

Create a Dataset as shown in the below picture

	A	B
1	Location	Changed
2	Chen nai	
3	Beng aluru	
4	Trivan drum	
5	Co chin	
6	Mys ore	
7	Mang aluru	
8	Hydera bad	
9	Amar avathi	
10	Chitt oor	
11	Kak inada	
12	Visha kapa tnam	

Click on the B2 cell and type the formula as shown in the below picture

B2

Take the mouse pointer to the bottom right corner of the B2 cell and drag it till B12 and the text in column A will be displayed as shown in the below picture

	A	B
1	Location	Changed
2	Chen nai	Chen Nai
3	Beng aluru	Beng Aluru
4	Trivan drum	Trivan Drum
5	Co chin	Co Chin
6	Mys ore	Mys Ore
7	Mang aluru	Mang Aluru
8	Hydera bad	Hydera Bad
9	Amar avathi	Amar Avathi
10	Chitt oor	Chitt Oor
11	Kak inada	Kak Inada
12	Visha kapa tnam	Visha Kapa Tnam

56. FILTER

The filter function is used to filter and display only a set of data from the entire Dataset.

Create a Dataset as shown in the below pictures

	A	B
1	NAME	COURSE
2	Aakash.S	Tally
3	Edu.S.Lebo	DMO
4	Dhanoosh lakshman.S	Python
5	Krithik.M	Python
6	Geroge Joseph	Python
7	Ashwanthkumar.A	Python
8	Suriyanarayanan.M	DCA(T)
9	Yogeshpatel.H	DCA(T)
10	Jamuna.D	DCA(T)

	A	B
1	NAME	COURSE
317	S.HARIKRISHNAN	DCA (T)
318	BHUVANESHWARI.E	HDFD
319	A.SHALINI	HDFD
320	N.NITHYASHREE	HDFD
321	G.JEYASHI	DCA(T)
322	DHAVIDHU RAJA.B	HDFD
323	G.AKSHAYA	ADPP+JAVA
324	PRABU.M.I	DCA(T)+ADV:EXCEL
325	ABISHA JERLIN.E	DFWD
326	SHARATH KUMAR.H	HDCA (T)
327	JANANI.V	DFWD

Create titles in the cells D2 and E2 as shown in the below picture

D	E
Name	Course

Click on the E2 cell and click on the Data menu and Click on the Data Validation and select the list option and in the source type the Values and click on the OK button as shown in the below picture

Data Validation

Settings | Input Message | Error Alert

Validation criteria

Allow: List ☒ Ignore blank ☒ In-cell dropdown

Data: between

Source: DCA(T),DCA(p),HDCA(T),HDCA(P), ADPP, ADJP, DMO, HDFD

This will create the list as shown in the below picture

E
Course
HDCA(T)
DCA(T)
DCA(p)
HDCA(T)
HDCA(P)
ADPP
ADJP
DMO
HDFD

Click on the Cell on E4 and type the formula as shown in the below picture

The filter select the entire Dataset from A2 to B327 and looks the course from B2 to B327 where it will display the names enrolled for the course selected from the drop down list in the E3 cell as shown in the below pictures

Name	Course
	DMO
Edu.S.Lebo	DMO
Dhananjeyan.K	DMO
Nehakumari.P	DMO
Tamilselvan.K	DMO
Satish.G	DMO
Ragini.R	DMO
Sasikala.K	DMO
Name	Course
	DCA(T)
Suriyanarayanan.M	DCA(T)
Yogeshpatel.H	DCA(T)
Jamuna.D	DCA(T)
Poongothai.L	DCA(T)
Srinithi.S	DCA(T)
Dhanalakshmi.B	DCA(T)
Petchaiammal.S	DCA(T)
Jagan.S	DCA(T)
Bhuvaneshwari.S	DCA(T)

57. DGET FUNCTION

The Dget or Dataget function is used to check the entire Dataset and filter the Dataset and display only the required data from the entire Dataset.

Create a Dataset as shown in the below picture

	A	B	C	D	E	F	G	H	I	J	K	L	M	
1	Course	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	
2	HDFD	13	16	16		10	16	14	13	18	20	24	16	17
3	HDCAP	12	17	25		16	12	21	16	13	22	18	15	12
4	HDCAT	13	25	23		14	13	11	15	12	20	13	10	12
5	HDWD	10	16	17		14	15	16	16	10	22	18	18	13
6	ADPP	18	11	17		25	18	22	23	10	24	24	11	24
7	ADJP	19	20	17		20	19	19	17	20	24	20	21	11
8	DCAP	14	15	11		18	15	10	19	20	21	10	25	19
9	DCAT	11	14	18		17	11	22	16	24	19	22	22	14
10	DMO	22	14	11		18	12	13	22	22	20	17	16	16
11	CCAE	13	21	23		25	12	12	21	23	23	12	16	12
12	HDPD	17	17	18		17	10	17	17	19	15	13	17	18
13	HDBD	13	15	18		15	16	13	15	14	19	13	11	16
14	HDCC	12	13	20		19	11	14	18	16	20	13	15	14

Create titles in the cells E16, F16 and G16 as shown in the below picture

16					Course	Month	Admission
----	--	--	--	--	--------	-------	-----------

Click on the Cell E17 and click on Data menu and click on Data Validation and click on the list and in the source select the cells and click on the OK button as shown in the below picture

Data Validation
?
X

Settings

Input Message

Error Alert

Validation criteria

Allow:

List

Data:

between

Source:

=\$A\$2:\$A\$16

☒ Ignore blank
☒ In-cell dropdown

This will add the course titles in the Cell E17 where the dropdown list was created as shown in the below picture

Click on the cell F19 and click on Data menu and click on Data Validation and click on the list and in the source select the cells and click on the OK button as shown in the below picture

This will add the months in the Cell F17 where the dropdown list was created as shown in the below picture

Click on Cell G17 and type the formula as shown in the below picture

The Dget function will have entire data selected from A1 to M14 and look for the selected month in F17 and will check for the course title in E16 and the selected course in E17 and display the value in G17 as shown in the below pictures

Course	Month	Admission
HDFD	Jan	13
Course	Month	Admission
ADPP	Jun	22
Course	Month	Admission
HDPD	Nov	17

If we want the displayed value in G17 to be highlighted in the Dataset for cross checking purpose we can use the Conditional formatting.

Select the Entire Dataset and click on Conditional formatting and click on New Rule and click on Use Formula to determine which cell has to be Formatted and type the formula as shown in the below picture

► Use a formula to determine which cells to format

Edit the Rule Description:

Format values where this formula is true:

`=AND($A1=$E$17, COLUMN()=MATCH($F$17, $B$1:$M$1, 0)+1)`

Click on the Format button and click on the fill tab and select a color for the cell back ground and click on the ok button to close the format window and click on the OK button again to close the New Rule window. Now the selected course and the selected month admission will be displayed in G17 and at the same time it will get highlighted in the Dataset as shown in the below picture

	A	B	C	D	E	F	G
1	Course	Jan	Feb	Mar	Apr	May	Jun
2	HDFD	13	16	16	10	16	14
3	HDCAP	12	17	25	16	12	21
4	HDCAT	13	25	23	14	13	11
5	HDWD	10	16	17	14	15	16
6	ADPP	18	11	17	25	18	22
7	ADJP	19	20	17	20	19	19
8	DCAP	14	15	11	18	15	10
9	DCAT	11	14	18	17	11	22
10	DMO	22	14	11	18	12	13
11	CCAE	13	21	23	25	12	12
12	HDPD	17	17	18	17	10	17
13	HDBD	13	15	18	15	16	13
14	HDCC	12	13	20	19	11	14
15							
16					Course	Month	Admission
17					HDCAT	Mar	23

58. CONVERT FUNCTION

The convert function is used to convert the given data into any other unit conversion. Create a Dataset as shown in the below picture

	A	B
1	Fahrenheit	Celsius
2	97	
3	113	
4	109	
5	102	
6	103	
7	99	
8	119	
9	116	
10	117	
11	120	

The Fahrenheit degrees will be converted to Celsius degrees using the Convert function. Click on B2 cell and type the formula as shown in the below picture

This will convert the Fahrenheit unit in to Celsius unit as shown in the below picture

	A	B
1	Fahrenheit	Celsius
2	97	36.1
3	113	45.0
4	109	42.8
5	102	38.9
6	103	39.4
7	99	37.2
8	119	48.3
9	116	46.7
10	117	47.2
11	120	48.9

59. INDEX AND MATCH

Create a Dataset as shown in the below picture.

	A	B	C
1	Course	Full Form	Fees
2	DCAP	Dip. In Computer Application Programming	12000
3	DCAT	Dip. In Computer Application Tally	12000
4	HDCAP	Honors Diploma in Computer Application	20000
5	HDCAT	Honors Diploma in Tally Computer Application Tally	20000
6	HDFD	Honors Diploma in Full Stack Development	25000
7	HDWD	Honors Diploma in Web Development	21000
8	HDJD	Honors Diploma in Java Full stack development	21000

In the Cells E1, G1 and H1 create the same titles as shown in the below picture

D	E	F	G	H
	Course		Full Form	Fees

Click on E2 cell and click on the Data menu and click on Data Validation and click on the list and select the source as A2 to A8 and click on the OK button as shown in the below picture.

The image shows the 'Data Validation' dialog box in Excel. The 'Settings' tab is selected. Under 'Validation criteria', 'Allow:' is set to 'List', 'Ignore blank' is checked, and 'In-cell dropdown' is checked. The 'Data:' dropdown is set to 'between'. The 'Source:' field contains the formula '=\$A\$2:\$A\$7'.

This will create a list values in E2 cell as shown in the below picture

	A	B	C	D	E
1	Course	Full Form	Fees		Course
2	DCAP	Dip. In Computer Application Programming	12000		HDCAP
3	DCAT	Dip. In Computer Application Tally	12000		DCAP
4	HDCAP	Honors Diploma in Computer Application	20000		DCAT
					HDCAP
					HDCAT
					HDFD
					HDWD

Click on the G2 cell and type the formula as shown in the below picture

The image shows the Excel formula bar for cell G2. The formula entered is: `=INDEX(A2:C8,MATCH($E$2,A2:A8,0),2)`

Click on the H2 cell and type the formula as shown in the below picture

The image shows the Excel formula bar for cell H2. The formula entered is: `=INDEX(A2:D8,MATCH($E$2,A2:A8,0),3)`

This will create the output as shown in the below pictures

E	F	G	H
Course		Full Form	Fees
HDCAP		Honors Diploma in Computer Application Programming	20000

E	F	G	H
Course		Full Form	Fees
DCAP		Dip. In Computer Application Programming	12000

60. LOOKUP

Create the percentage and grades from A1 to B6 cells as shown in the below picture

	A	B
1	Percentage	Grade
2	50	E
3	60	D
4	70	C
5	80	B
6	90	A

Create a Dataset from A9 to B35 as shown in the below picture

	A	B
9	Name	Percentage
10	A	64
11	B	51
12	C	94
13	D	87
14	E	61
15	F	67
16	G	91
17	H	63
18	I	87
19	J	82
20	K	57
21	L	56
22	M	58
23	N	70
24	O	80
25	P	61
26	Q	65
27	R	72
28	S	54
29	T	89
30	U	72
31	V	57
32	W	85
33	X	85
34	Y	57
35	Z	79

Click on the cell C9 and type the title as Grade. Click on the C10 cell and type the formula as shown in the below picture.

The Lookup function will take the value in the Cell B10 and compare the values from A2 to A6 and if it falls with any of the Values specified in the cells it will Apply the Grade listed from B2 to B6. When we take the mouse pointer to the bottom right of the C10 cell and drag it till C35 this will fill the Grades according to the marks as shown in the below picture.

	A	B	C
9	Name	Percentage	Grade
10	A	64	D
11	B	51	E
12	C	94	A
13	D	87	B
14	E	61	D
15	F	67	D
16	G	91	A
17	H	63	D
18	I	87	B
19	J	82	B
20	K	57	E
21	L	56	E
22	M	58	E
23	N	70	C
24	O	80	B
25	P	61	D
26	Q	65	D
27	R	72	C
28	S	54	E
29	T	89	B
30	U	72	C
31	V	57	E
32	W	85	B
33	X	85	B
34	Y	57	E
35	Z	79	C

61. HLOOKUP

Create a Dataset as shown in the below picture.

	A	B	C	D	E	F	G	H	I	J	K	L	M
1	Course	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
2	HDFD	13	16	16	10	16	14	13	18	20	24	16	17
3	HDCAP	12	17	25	16	12	21	16	13	22	18	15	12
4	HDCAT	13	25	23	14	13	11	15	12	20	13	10	12
5	HDWD	10	16	17	14	15	16	16	10	22	18	18	13
6	ADPP	18	11	17	25	18	22	23	10	24	24	11	24
7	ADJP	19	20	17	20	19	19	17	20	24	20	21	11
8	DCAP	14	15	11	18	15	10	19	20	21	10	25	19
9	DCAT	11	14	18	17	11	22	16	24	19	22	22	14
10	DMO	22	14	11	18	12	13	22	22	20	17	16	16
11	CCAE	13	21	23	25	12	12	21	23	23	12	16	12

Click on the cell A18, create the headings as shown in the below picture

18	Course
19	HDFD
20	HDCAP
21	HDCAT
22	HDWD
23	ADPP
24	ADJP
25	DCAP
26	DCAT
27	DMO
28	CCAE

Click on cell B18 and click on Data menu and click on Data Validation and select the list and set the values and click on the OK button as shown in the below picture

Data Validation

Validation criteria

Allow:

List
▼
☒ Ignore blank
☒ In-cell dropdown

Data:

between
▼

Source:

= \$B\$1:\$M\$1
↑

This will display the month names in the drop-down list as shown in the below picture

18	Course	Jan
19	HDFD	Jan
20	HDCAP	Feb
21	HDCAT	Mar
22	HDWD	Apr
23	ADPP	May
24	ADJP	Jun
25	DCAP	Jul
26	DCAT	Aug
27	DMO	Sep
28	CCA	Oct
29		Nov
30		Dec

Click on the B19 cell and type the formula as shown in the below picture

B19	:	✕	✓	<i>fx</i>	=HLOOKUP(B18,A1:M11,{2;3;4;5;6;7;8;9;10;11},0)
-----	---	---	---	-----------	--

The Hlookup function will look for the month selected in the list box and will refer the Dataset running from A1 to M11 and will check the values from rows 2 to 11 and will bring the exact match. As the dataset is checked in a Horizontal way it has been named as Hlookup.

The Hlookup filters the Dataset as shown in the below pictures

18	Course	Jan	18	Course	Jun	18	Course	Nov
19	HDFD	13	19	HDFD	14	19	HDFD	16
20	HDCAP	12	20	HDCAP	21	20	HDCAP	15

Click on the cell H6 and start typing the titles as shown in the below picture

Enl. No	Name	Course	Fees
---------	------	--------	------

Click on the cell I7 and type the formula as shown in the below picture

I7 =VLOOKUP(H7&"*", \$B\$1:\$F\$641, {2,3,5})

This will look for the Enrolment number typed in H7 and fetch the data by looking from the cells B1 to F641 which is locked and will fetch the data of the 2nd column which has the student's name, 3rd column which has the course and the 5th column which has the total fees. The result is as shown in the below pictures.

Enl. No	Name	Course	Fees
MDV010	Poongothai.L	DCA-Tally	10000

Enl. No	Name	Course	Fees
MDV050	Lokesh.M	DCA-Tally	7000
